A case may have multiple primary tumors, one tumor per record. Use INDEX\_TUMOR=1 to select the record which contains the tumor characteristics to be used in subject-based analysis.

### Diagnosis Site Information

Variable Name	Description	Data Source (ERS Database)	Comments
STUDYID	Study ID		
SEQ_PRIM	Sequence of the primary tumor	ERS diagnosis report Field no. 118	<p>If a case has multiple primaries, use this to identify the tumor and for linkage to other tumor related files.</p> <p>If a case has only 1 breast tumor, SEQ_PRIM=0.</p> <p>If a case has multiple primary tumors, SEQ_PRIM is 1, 2, or 3, etc. The first primary tumor is always breast cancer. The subsequent primary tumors could be invasive breast cancer, CIS, or other cancers.</p> <p>For the 3<sup>rd</sup> invasive and other cancer. The type of tumor was noted but no detailed medical record abstract was done.</p>

## Treatment (First and Subsequent Courses)

Detailed treatment data were obtained from ERS Treatment RX Data 1, Treatment RX Data 2, and Treatment User Data 1 reports. A lot of data manipulations were done to pull appropriate data from these reports. Treatment data were split into 6 different datasets.

Datasets generated from SAS program: RX\_DATA.SAS

- 1) Surgery data -- Surgery.sas7bdat
- 2) Radiation -- Radiation.sas7bdat
- 3) Chemotherapy -- Chemo.sas7bdat
- 4) Hormone -- Hormone.sas7bdat
- 5) Biologics -- Biologics.sas7bdat
- 6) Other treatment -- Other\_Rx.sas7bdat

Each case may have multiple primaries (SEQ\_PRIM); each primary may have multiple records.

**For a handful of cases with multiple invasive breast primaries, the treatment data may be recorded differently for each tumor.** For example, ID 57695 has first course chemo treatment recorded for the first primary but no data for the other tumor. This is because the second tumor was diagnosed after chemo was administered. Therefore, chemo data would be recorded for the first tumor only.

**For bilateral cases with subsequent treatment for recurrences,** the only time we would enter chemo/biologic treatments to both entries is if the recurrence is a distant one (code 40 or above). Treatment should be “primary specific”, except for distant mets where it is too hard to tell which invasive tumor spread to the distant sites. That is, if recurrence was local/regional to the right breast, then treatment would be recorded for the right breast only.

## Surgery

### SAS Dataset: SURGERY.sas7bdat

This dataset contains all surgical procedures, including biopsies. Subjects with any surgical procedures are included. Each record contains data for a surgical procedure. A subject may have multiple surgical procedures, hence, multiple records. For bilateral cases, surgical procedure performed may be different between the breasts.

## Radiation

### SAS Dataset: RADIATION.sas7bdat

This dataset contains radiation treatment, first and subsequent course (if any). Only subjects with radiation administered are included. Each record contains data for a radiation treatment. Subjects may have multiple radiation treatments, hence, multiple records. For subjects with bilateral tumors, radiation may be administered to only one side of the breast. When radiation was administered to both sides of the breast, treatment data may be different.
