LECTURE DESCRIPTION

The global cancer burden is increasing, and several factors contribute to this trend in low- and middle-income countries. These factors include the aging population, advancements in treatment and detection, improved treatment options, lifestyle and environmental factors, and urbanization. This seminar will provide examples of global cancer health work with a focus on capacity building of the careforce/workforce to meet the needs of individuals, families, and communities.

Exploring Cancer

Cancer is the 2nd leading cause of deaths in North Carolina. What causes Cancer? Why have we not cured Cancer yet? What are some of the myths that surround Cancer care? Why do people of color seem to develop and die from Cancer at rates much higher than the majority of the population?

The Exploring Cancer webinar series, tackles these questions and more. Learn from cancer biologists, physicians, public health experts, and other cancer specialists from NCCU, UNC-Chapel Hill, and NC A&T.
