

# UNIVERSITY CANCER RESEARCH FUND 2020 LEGISLATIVE REPORT

Annual Financial Report to the Joint Legislative Education Oversight Committee and the Office of State Budget and Management

Submitted November 1, 2020, in accordance with G.S.116-29.1

Since its creation in 2007 – the same year that cancer overtook cardiovascular disease as the leading cause of death in North Carolina – the University Cancer Research Fund has played a critical role in promoting collaborative and innovative research in cancer prevention, treatment and outcomes.

This landmark investment by the North Carolina General Assembly has not only helped make the UNC Lineberger Comprehensive Cancer Center a global leader in cancer research and care – it also has led to a meaningful difference in the health and economic well-being of North Carolina. As chair of the Cancer Fund Research Committee, I am pleased to submit our legislative report highlighting some of the many ways the UCRF has benefited our state.

Our world-class faculty are the driving force behind great research. This past year, UNC Lineberger used UCRF support to recruit and retain 27 faculty who are at the top of their fields or show tremendous promise. The UCRF has also allowed us to forge important partnerships with other universities in North Carolina and around the world to share and advance our knowledge about this deadly disease. During the past 13 years, UCRF funding has enabled us to recruit and retain 300 faculty in total. Moreover, the UCRF has funded critical investments in equipment, technology, shared resources and community projects to help patients in all 100 North Carolina counties.

The Fund continues to bring beneficial financial gains to our state. To date, we've seen outstanding economic return reaching more than \$10 for every dollar of UCRF investment this fiscal year. Some noteworthy economic highlights include:

- Expanding the state's economy: UCRF generated more than \$656.4 million in total economic impact in North Carolina in FY 2020. This includes direct spending of more than \$335.9 million within the state.
- Creating jobs: UCRF directly supported employment in FY 2020 of more than 1,094 jobs in North Carolina and an additional 1,975 jobs through both the indirect and induced impacts of those direct jobs and the spending generated from the UCRF within North Carolina.
- Generating tax revenue: UCRF investments provided more than \$20.8 million in local and state tax revenue in FY 2020.
- Leveraging federal research funds: Researchers used findings from UCRF-funded research to attract more than \$173.8 million in federal research grants, bringing the total to more than \$216 million in external funding in FY 2020 alone.

As it has since its inception, the UCRF continues to positively affect our state's economy and the health of cancer patients in North Carolina and beyond. On behalf of our faculty who are working together to improve cancer research and care – and on behalf of all the patients they serve – thank you for your ongoing support of this tremendous investment in the fight against our state's deadliest disease.

Sincerely,

Kevin M. Guskiewicz, PhD  
Chair, Cancer Research Fund Committee

# INTRODUCTION

The leading cause of death in our state, cancer is a disease that touches about 40% of all North Carolinians. For researchers and care providers seeking ways to improve prevention, treatment and outcomes for cancer patients, the University Cancer Research Fund (UCRF) has been a vital resource that is benefiting patients in North Carolina and beyond.

The General Assembly created the UCRF in 2007 to support world-class research at the UNC Lineberger Comprehensive Cancer Center, the only public National Cancer Institute-designated center of excellence in North Carolina and a global leader in cancer research.

The health and research impacts of this investment have been tremendous: The UCRF allows UNC Lineberger to recruit, retain and support the research of outstanding faculty who are top experts in their fields of study. It also supports cutting-edge facilities, equipment and technology that are critically essential to collaborative, transformative research.

In keeping with UNC Lineberger's historical mission of education, research and public service, UCRF funding supports innovative research partnerships with other North Carolina organizations, a large clinical trials network, educational outreach initiatives, technology and shared data resources, and community-based interventions that have reached patients and providers in all 100 counties.

UCRF investments in cancer research, faculty and facilities have helped elevate the reputation of North Carolina and UNC-Chapel Hill. Nature Index, which is part of a prestigious scientific journal publishing company, ranked UNC-Chapel Hill as one the top 15 most productive institution in the world for publishing cancer research studies. The ranking was based on a review of more than 20,000 research articles published in 82 prominent natural science journals from 2015 to 2019.

In addition to these important research impacts, since its creation the University Cancer Research Fund has generated significant economic benefits for North Carolina including:

- Directly supporting 1,094 research-related employees in FY 2020.
- Creating the equivalent of 1,975 new induced or indirect jobs, based on an independent economic evaluation.
- Having an overall economic impact that increases each year, reaching \$656.4 million in FY 2020.
- Leveraging more than \$216 million in outside funding in FY 2020 that is directly linked to faculty who were recruited or retained by UCRF funds, or attributable to innovation grants, technology and infrastructure investments from the UCRF.
- Generating an increased return on investment each year, exceeding a 10-to-1 return in FY 2020.

# INTRODUCTION

## HISTORY

The General Assembly created the University Cancer Research Fund in 2007, the year when cancer became the leading cause of death in North Carolina. Originally funded by a combination of state appropriations, tobacco settlement funds, and taxes on non-cigarette tobacco products such as snuff, the UCRF received \$25 million in 2007.

In 2013, the legislature consolidated all earmarked tobacco settlement monies into the General Fund, eliminating that source of UCRF support and thereby reducing the UCRF's funding stream by roughly 16%. The portion of UCRF revenue from non-cigarette tobacco product sales has risen as the population expanded and has varied year by year. In FY 2020, the state's total allocation to the UCRF was \$52.6 million.

The Cancer Research Fund Committee, created by the General Assembly to provide continued oversight and to ensure that UCRF resources are invested responsibly, adopted a Strategic Plan in 2009 to target UCRF resources in areas where they can have maximum impact:

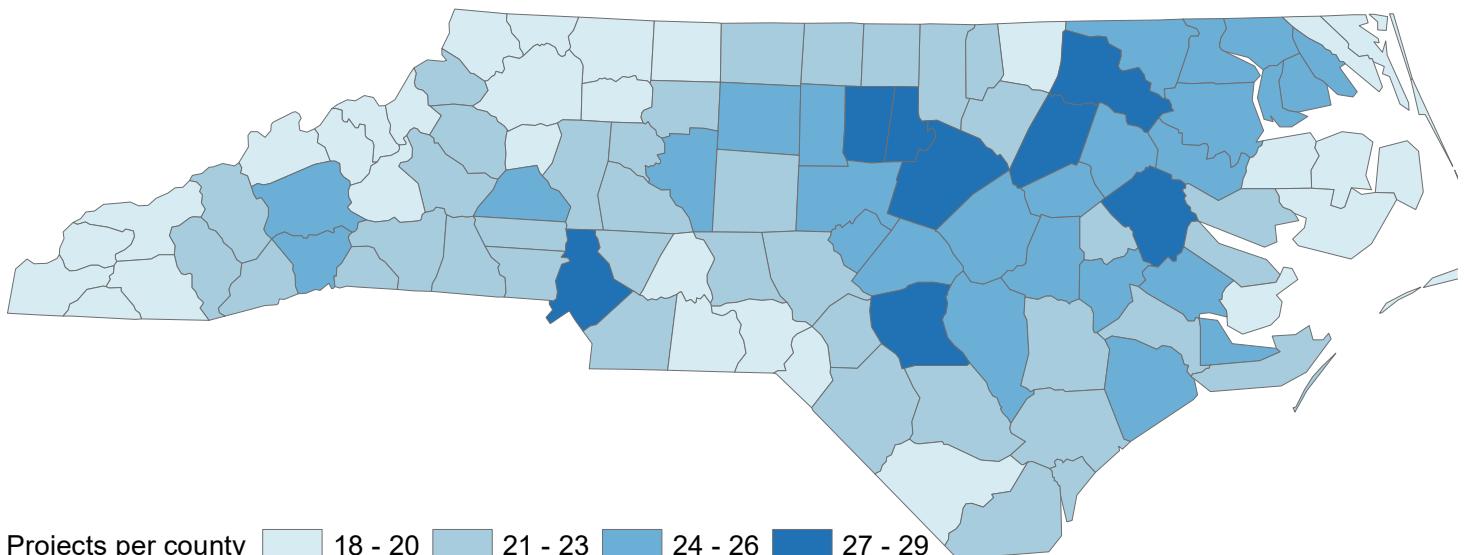

- Strategic research priorities in genetics, novel therapies, and North Carolina cancer outcomes;
- Clinical excellence through selective opportunities that enable UNC Lineberger to continue to be a leader in a rapidly changing field of research; and
- Critical infrastructure such as technology, training, outreach and other core resources.

Complementing the UCRF's significance in ongoing research, infrastructure and public service are the state's two major capital investments in cancer care. The N.C. Cancer Hospital opened in 2009 and serves patients from all 100 counties. Last year, more than 208,000 outpatient appointments took place in the hospital, UNC Lineberger's home for clinical care and research, and its affiliated clinics. In 2014, Marsico Hall opened as a cross-disciplinary collaborative research facility, with cutting-edge equipment and technology that further accelerates research capabilities.

Since 2008, the Cancer Research Fund Committee has published regular reports on the UCRF's supported activities. In 2011, the General Assembly mandated an annual financial report that includes the UCRF's effects on the state's economy, details on expenditures of UCRF monies and outside funds leveraged by UCRF support, and other performance measures.

The University Cancer Research Fund has been a vital investment for North Carolina. It has generated considerable economic and health benefits that will only continue to grow as UNC Lineberger remains a global leader in the fight against cancer.

## OUTREACH ACROSS NORTH CAROLINA

### Cancer Data Resources

Cancer Information and Population Health

Carolina Breast Cancer Study

Carolina Senior Registry

Lung Cancer Screening Registry

UNC Health Registry

### Understanding Cancer Disparities

CDC CRC simulation modeling

CHANCE

Comparative Effectiveness and Survivorship health in bladder cancer

Comparative Effectiveness of breast cancer screening and diagnostic evaluation by breast density

Economic burden of breast cancer

Effect of HPV self-collection on cervical cancer screening in high risk women

Effect of the breast density legislation on supplemental screening

GMaP: Geographic Management of Cancer Health Disparities Program

## ECONOMIC IMPACTS

To determine whether the UCRF is achieving its goal of stimulating North Carolina's economy, UNC Lineberger again hired Tripp Umbach, a nationally respected consulting firm, to estimate the UCRF's economic impact for FY 2020. Tripp Umbach examined the UCRF's immediate impact on state income growth and employment. The Fund's overall economic impact was estimated as the sum of its direct and indirect and induced impacts (see the full report in the Appendix). Direct impact resulted from two major sources: expenditures from the UCRF itself, and the expenditure of UCRF-attributable research funds awarded to UNC by federal, foundation and other sources. The indirect and induced impact was calculated by applying standard multipliers to direct expenditures.

For FY 2020, UCRF's total allocation was \$52.6 million. Using standard methodologies, Tripp Umbach estimated that in FY 2020 the UCRF:

- Had an overall economic impact of \$656.4 million, including \$335.9 million in direct spending and \$320.5 million in indirect and induced impact attributable to external grant funding and downstream spending by employees, vendors and contractors.
- Generated more than \$10 in economic impact for every UCRF dollar expended.
- Supported more than 3,069 jobs, including the direct support of 1,094 jobs and an additional 1,975 jobs through the increased extramural funding and the indirect and induced impacts of those direct jobs and the spending generated within North Carolina.
- Resulted in nearly \$20.8 million in state and local tax revenues to North Carolina.

Tripp Umbach has been used for economic analysis since FY 2013. Prior to that, economic impact analyses were performed by SRA International and the UNC Center for Competitive Economies (Frank Hawkins Kenan Institute of Private Enterprise.) Though these two entities used slightly different methodologies, the calculations and reports are based on industry standards. Based on their analyses, the cumulative economic impact of the UCRF since its inception is more than \$4.1 billion.

## FACULTY JOB CREATION AND RETENTION

Outstanding faculty are at the core of the UCRF's successes. They spearhead the groundbreaking research that leads to important advancements in cancer treatment, prevention and early detection. They also hire staff, train students and fellows, purchase equipment, and earn research funding from other sources both inside and outside North Carolina. Since the UCRF was created in 2007, it has had a remarkably positive impact on cancer research faculty:

- **Recruitment:** The UCRF has supported the recruitment of 20 faculty this year. These faculty are developing a wide range of research programs in cancer genomics, tumor etiology, targeted therapies, vaccines, immunotherapies, pathology, health outcomes, multiple specific cancer types, and other areas critical to improving cancer prevention, early detection, diagnosis and treatment in our state.
- **Retention:** UCRF support has enabled the retention of seven faculty this year, inducing top talent to stay at UNC where they can continue their research and clinical care.

# ECONOMIC IMPACTS

## EXTRAMURAL FUNDING GROWTH

Almost all extramural funds come to UNC Lineberger from outside North Carolina, adding significantly to the state's economy. The UCRF's Strategic Plan establishes extramural research funding – particularly competitive federal funding – as a key measure of success. UCRF support is keeping the state at the forefront of research nationally and leveraging significant amounts of extramural research funds for North Carolina.

Faculty members have been able to use UCRF support to underwrite research, leveraging findings from those studies to generate additional funding. Key trends include the following:

- FY 2020 funding from outside sources that is directly attributable to the UCRF totaled \$216 million in annual total cost dollars.

This amount is based on a snapshot of active attributable extramural funding held by faculty in the first quarter of FY 2020. The dollars represent one year of funding. A complete list of the awards is included in the Appendix.

The positive effects of faculty recruitment and retention, technology enhancement, and developmental projects continue to accumulate. UCRF-attributable extramural funding has increased by more than 40-fold since FY 2008, from \$5 million to \$216 million.

- The \$216 million in external funding in FY 2020 represents a nearly 9.4% increase from FY 2019.

## INTELLECTUAL PROPERTY, INNOVATION, AND ENTREPRENEURSHIP

The UCRF supports innovative research and discoveries that have led to notable job creation and the launch of companies dedicated to converting key research findings into clinical advances. In partnership with UNC's North Carolina Translational and Clinical Sciences Institute, the UCRF promotes an entrepreneurial mindset at UNC, and supports specialized staff to maximize the development and licensing of university intellectual property. More than 60 startup companies have launched or expanded their reach thanks to the UCRF. Nearly all of them are located in North Carolina and employ a workforce of more than 500 in seven North Carolina counties.

## GUIDING PRINCIPLES FOR UCRF INVESTMENT

In 2009, the Cancer Research Fund Committee that was created to oversee the UCRF adopted a strategic plan to guide the best and most effective use of the state's investment. The plan recommended that UCRF funding target three specific research priorities – genomics, novel treatments, and North Carolina cancer outcomes – and that the UCRF should be leveraged in support of key clinical and infrastructure resources.

**Research Priorities:** The use of UCRF funding is guided by three specific research priorities where – with focused investments in major scientific programs, disease-based initiatives, or cutting-edge research platforms – UNC Lineberger can be a world leader and have meaningful impact:

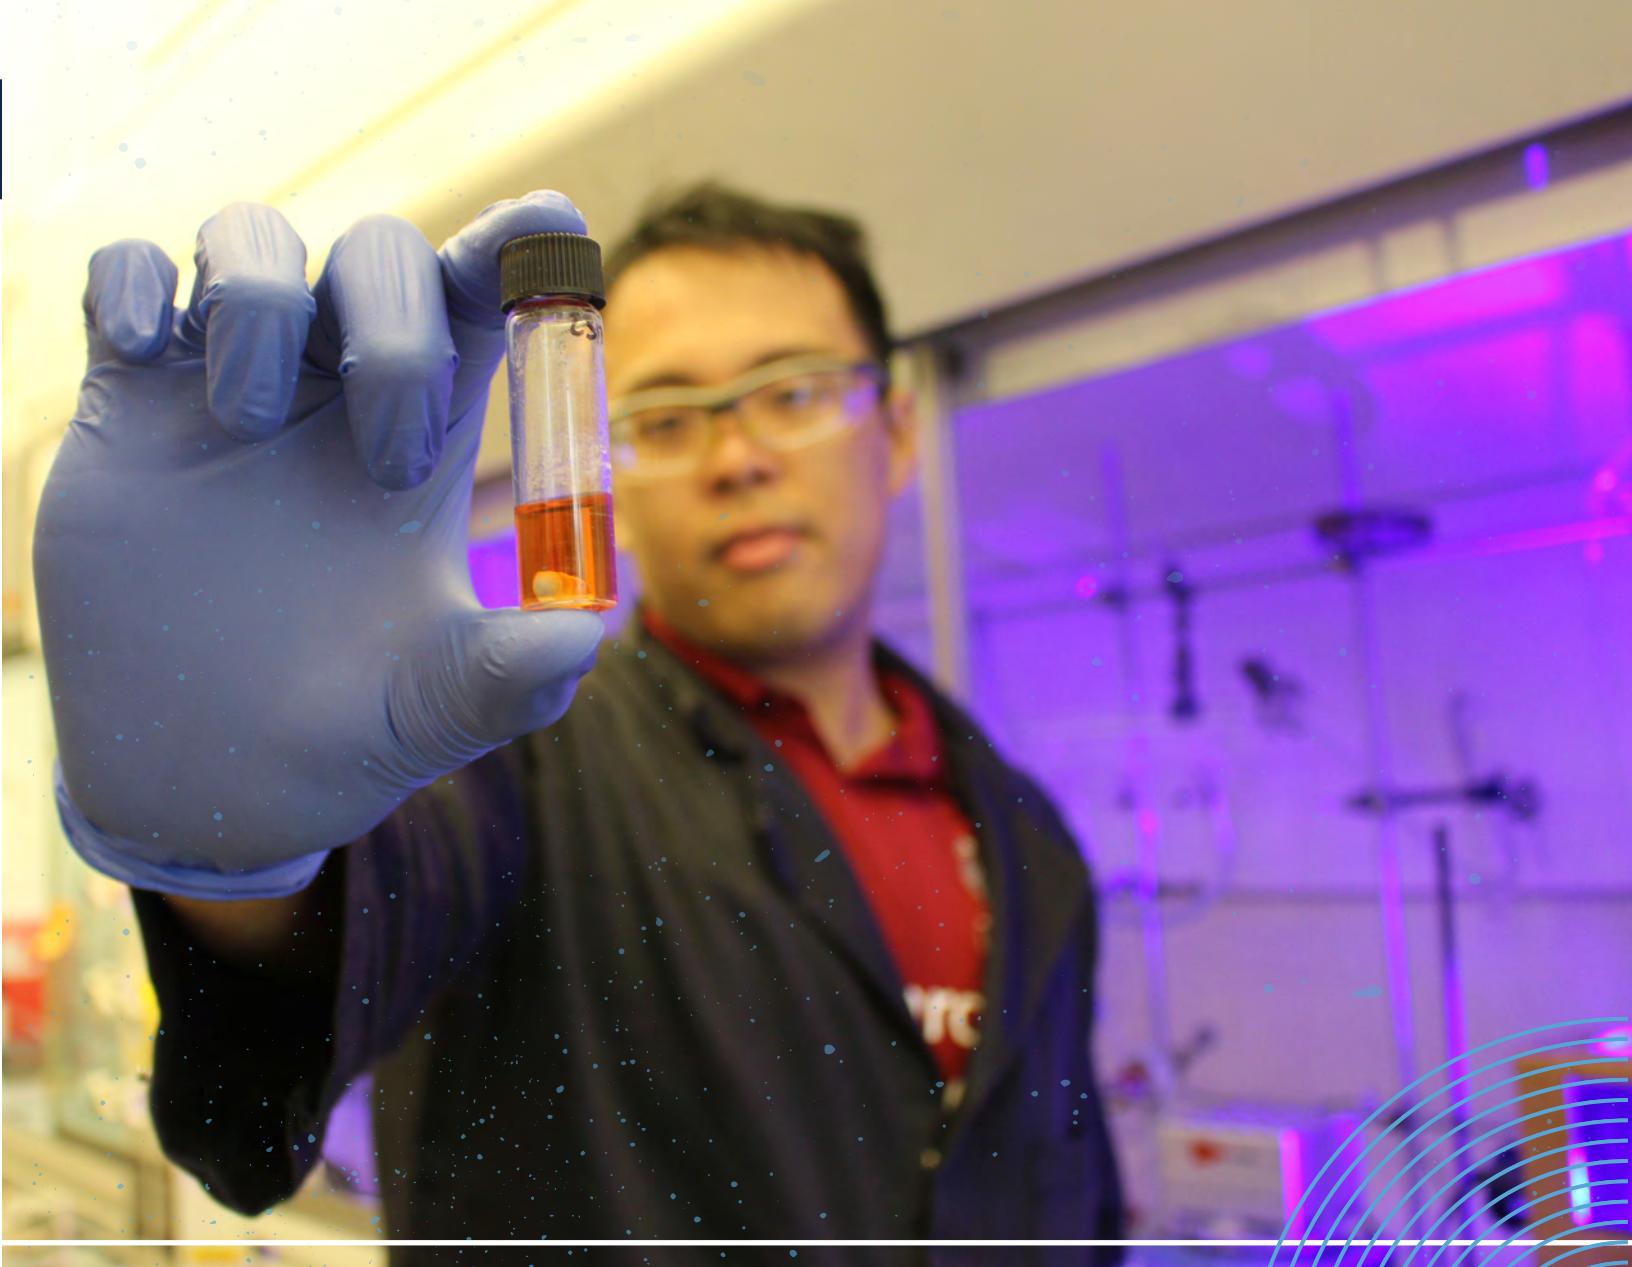

- **Understanding the Role of Genetics in Cancer Causation and Treatment:** to discover the genes that predispose families to cancer and that predispose cancer patients to poor treatment outcomes – especially by looking for the various genetic mutations in specific cancer subtypes that lead to cancer therapy failure.
- **Developing Novel Therapeutics:** to devise new therapies that are targeted to the specific vulnerabilities of treatment-resistant cancers, and to develop new ways of delivering treatments that reduce toxic side effects for patients. This research priority relates closely to the genetics initiative, and makes key observations that will be utilized in clinical applications as quickly as possible. This goal has expanded dramatically with the advent of immunotherapy.
- **Optimizing NC Cancer Outcomes:** to enhance the quality of oncology and survivor care, and to build population-based datasets that track the occurrence and treatment of cancer across North Carolina in order to support research designed to improve community prevention and early detection. The ultimate goal is to understand North Carolina's cancer problem at a level unprecedented in the nation and to design research interventions aimed at rectifying these problems at the practice, health system and community levels.

**Clinical Infrastructure and Excellence:** UCRF funds also are leveraged to enable UNC Lineberger to adapt to a rapidly changing field by establishing critical infrastructure and pursuing selective opportunities, outside of the three general research priorities, where the cancer center could strive for clinical excellence and have a major impact in cancer research.

This approach allows the UCRF to seize research or clinical opportunities as they arise and to provide the top minds in the field with the resources they need. Examples include seed funds to recruit top researchers, support of technology and equipment for use by multiple faculty members, and the development of shared research resources. Thanks to the UCRF, UNC Lineberger has been able to recruit, retain and support outstanding faculty members with expertise and leadership in key clinical areas.

Investments in imaging, informatics and fundamental research techniques give UNC Lineberger's clinician scientists the tools they need to improve patient outcomes, while telemedicine and virtual tumor boards connect doctors and hospitals across the state with UNC Lineberger's oncology experts. The UCRF provides the opportunity to grow and enhance UNC Lineberger's multidisciplinary excellence in cancer care and to develop a statewide infrastructure that helps bring leading-edge clinical research and applications into community practices and research institutions across North Carolina.

This year's report shows the importance of shared infrastructure and clinical excellence opportunities. It features a few key focus areas where UNC Lineberger is pushing the envelope in all three general research priorities – genomics, novel therapies, and outcomes – discusses some of the UNC Lineberger studies that have been published in high-impact journals, highlights several notable faculty research awards, and details outreach efforts across the state.

## RESEARCH IMPACTS

# UNC Lineberger partners with Fort Bragg to tackle tobacco use

Col. Sheryl A. Bedno, MD,  
DrPH

A strategic partnership between the UNC Lineberger Comprehensive Cancer Center, Fort Bragg Department of Public Health, and the Cumberland County health department is helping the nation's largest Army base by population rework its tobacco policies and take steps to improve the health of its soldiers and their families.

"Most of our beneficiaries and all of our civilian workforce live off-post and are not on Fort Bragg proper, so it was critical to develop relationships within the community," said Col. Sheryl A. Bedno, MD, DrPH, director of the Department of Public Health at Fort Bragg. "What's really exciting is that now, instead of people working on overlapping projects, we are working on these efforts together. A lot has happened in this short amount of time, and it's really changed the way we've done public health."

The Partnership for a Fort Bragg Tobacco-Free Community was launched in 2018, after a delegation from Fort Bragg came to Chapel Hill and met UNC Lineberger's Kurt M.

Ribisl, PhD, a tobacco control policy expert and chair of the department of health behavior at UNC's Gillings School of Global Public Health.

"I was looking for an opportunity to do something with our military in North Carolina, which is the most military-friendly state in the country," said Ribisl, who had been working with the Air Force and University of Virginia on a parallel tobacco control project, "and after the initial meeting, we started brainstorming and talking about projects we could do together at Fort Bragg."

Ribisl

## **Weight gain prevention intervention activities with the U.S. Air Force**

Using methodologies supported by UCRF funding, UNC Lineberger's **Deborah Tate, PhD**, professor of nutrition and health behavior, and colleagues and students from the UNC Gillings School of Global Public Health are collaborating with faculty from the University of Virginia stationed at Lackland Air Force Base in San Antonio on weight gain prevention efforts with U.S. Air Force airmen. As is true of the U.S. population at large, weight gain is a problem for military personnel.

Tate

This is particularly an issue for some pilots who fly aircraft with cockpits designed for thinner cohorts. There is a need for specific evidence-based interventions, adapted for military implementation, to help improve readiness and fitness in the military. The UNC-UVA team completed a 9-week pilot intervention with 391 airmen to examine the feasibility of implementing a weight gain prevention intervention in preparation for a larger and longer-term study. The team also surveyed young airmen to assess their level of concern for weight gain and interest in participating in a digital weight gain prevention intervention.

Based on their findings, the UNC-UVA team is developing a NIH grant proposal for submission in early 2021 that proposes to adapt a successful weight gain prevention intervention developed by Tate and colleagues for young adults using digital tools, for implementation in the adult Air Force population.

According to the U.S. Army Public Health Center's 2019 Health of the Force report, 28% of Fort Bragg soldiers self-reported use of at least one tobacco product in the last 30 days before their annual health examination. Studies show that tobacco use affects combat readiness by contributing to, for example, greater injury risk, poorer wound healing and worse night vision. Military personnel who use tobacco have worse physical and mental health and are at greater risk of early discharge compared to their non-smoking colleagues. Annually, the Department of Defense spends more than \$1.6 billion on health costs and lost productivity due to tobacco-related health issues.

UCRF funds supported the startup of the collaboration, which has since received additional grant funds from the CDC's Tobacco Prevention and Control branch. Their goal is to make policy changes and education work to lower tobacco use by Fort Bragg soldiers and their families from 26% to 17% by 2025.

Early results of the partnership's efforts have been significant – helping to leverage the additional grant funding, generating three abstracts that were accepted at the 2020 Annual Convention of the American Public Health Association, and leading to the development of the Tobacco Cessation and Prevention Fort Bragg Strategic Plan. Among the group's work:

- Finding that tobacco and vaping retailers are densely located around Fort Bragg, placing soldiers and their families at higher risk for tobacco initiation and maintenance. This work can help inform discussions about local zoning regulations.
- Determining that on-base tobacco retailers did not meet Department of Defense guidelines that tobacco prices should be no more than 5% lower than prices at off-base retailers.
- Recommending the removal of the 20 Designated Tobacco Areas (DTAs) on Fort Bragg the team evaluated after finding that none of them complied with the base's official tobacco policy.
- Conducting tobacco treatment training for health care providers, including behavioral health professionals and pharmacists who work on Fort Bragg.
- Implementing a tobacco cessation media campaign tailored to active-duty soldiers and beneficiaries who lived on Fort Bragg and within a 40-mile radius of the base.

The partnership is also working toward a formalized public health practicum program between UNC Gillings and the Fort Bragg Department of Public Health.

"Colonel Bedno has been so enthusiastic and willing to partner," said **Hannah Prentice-Dunn, MPH**, project manager of UNC Lineberger's Cancer Prevention and Control Program. "It is a strategic move to bring state and local health experts to the table to help the soldiers at Fort Bragg, and she really opened the doors for all of this to happen."

The partnership has enabled further ongoing collaboration with the Fort Bragg public health team and their response to COVID 19 that has so affected all aspects of health.

**Prentice-Dunn**

***Studies show that tobacco use affects combat readiness by contributing to, for example, greater injury risk, poorer wound healing and worse night vision. Military personnel who use tobacco have worse physical and mental health and are at greater risk of early discharge compared to their non-smoking colleagues.***

## UNC Lineberger cellular immunotherapy pioneers hit key milestone

**C**ellular immunotherapy, which uses patients' own genetically engineered immune cells to attack cancer, is a growing field of research that recently hit a key milestone at UNC Lineberger.

UNC Lineberger's cellular immunotherapy program, which was created in 2016 with resources from the University Cancer Research Fund, has designed and developed its 100th product. This means 100 personalized immunotherapy products have been created from UNC patients' immune cells in just the past three years.

"What we envisioned has come to fruition better than we initially anticipated," said program co-director **Jon Serody, MD**, the Elizabeth Thomas Professor of Medicine, Microbiology and Immunology in the UNC School of Medicine Division of Hematology/Oncology, who began pushing for a cellular immunotherapy center at UNC in 2013. "We are the only academic medical institution in the last 10 years to develop a program of our size and are treating patients. The UCRF has provided critical infrastructure and support – it's a testament to UNC Lineberger's diligence and commitment to both the science and translational components of this program. The investment has brought innovation to the therapy of North Carolinians with far advanced cancer."

Cellular immunotherapy is truly personalized cancer treatment. It involves extracting T-cells – disease-fighting immune cells – from the patient's blood, and genetically engineering them to recognize and destroy the patient's own cancer cells.

Left to right: Gianpietro Dotti, MD, Jonathan Serody, MD, and Barbara Savoldo, MD, PhD

The engineered T-cells, called chimeric antigen receptor T-cells or CAR-T cells, are then multiplied and infused back into the patient. For many patients, immunotherapy is a last resort, as their cancer has not responded to other treatments.

UNC Lineberger is one of only a few centers in the United States that has the personnel and facilities to design, produce and deliver CAR-T therapy directly to patients. Using UCRF funds, UNC Lineberger began its program by recruiting two leading cellular immunotherapy pioneers – **Gianpietro Dotti, MD**, and **Barbara Savoldo, MD, PhD** – and building a federally certified Good Manufacturing Practices (GMP) facility to make the T-cell products that are used in its clinical trials.

"The most challenging part, and what is driving our interest, is moving this

research activity into real therapeutic options for patients," said Savoldo, professor of pediatrics and assistant director of UNC Lineberger's immunotherapy program. "That requires a lot of infrastructure – from the GMP where we make the cells, to the regulatory and clinical pieces of our program. There is a lot of interest in CAR-T cells and genetic engineering, but UNC is one of only a few places where can do this from the lab into actual patients. Being able to develop something new is really unique and important."

UNC Lineberger's cellular immunotherapy program has 10 ongoing clinical trials. One of the first trials the researchers conducted has already shown promising results for patients with Hodgkin and non-Hodgkin lymphoma who have not responded well to other treatments.

**UNC Lineberger is one of only a few centers in the United States that has the personnel and facilities to design, produce and deliver CAR-T therapy directly to patients. Using UCRF funds, UNC Lineberger began its program by recruiting leading cellular immunotherapy pioneers and building a federally certified Good Manufacturing Practices (GMP) facility to make the T-cell products that are used in its clinical trials.**

The study found that an infusion of CAR-T cells after chemotherapy was safe, effective and without the toxic side effects that often accompany cancer treatments. The initial results generated the interest of Tessa, a pharmaceutical company that wants to develop this as a therapy for patients in the United States and the world. The next step is a nationwide study including UNC and about a dozen other medical institutions.

Dotti, Savoldo and Serody agree that the UCRF plays an essential role in UNC Lineberger's cellular

immunotherapy center as it not only supports the costs of operating the GMP and the clinical trials, but has been used to recruit, retain and train talented researchers to grow the program. The UCRF investment has helped to generate millions in additional grant dollars – including an \$8 million Stand Up To Cancer grant, the only grant funded by the program for CAR-T lymphoma treatment and research, which was awarded to UNC Lineberger and other institutions across the country last year.

In addition to trials for blood cancers

like leukemia and lymphoma, UNC Lineberger researchers are planning studies using CAR-T cells for solid tumors such as ovarian and brain cancers.

"The way we proceed is very pragmatic – we don't do anything in patients without strong data," said Dotti, professor of microbiology and immunology and co-director of the immunotherapy program. "We proceed step-by-step, we learn something from a study and the next study is to find out how can we make it better. This is what we do at UNC. We are supposed to innovate."

## **Novel CAR-T immunotherapy proves effective against Hodgkin lymphoma**

UNC Lineberger researchers have shown, for the first time, that a person's immune cells can be reprogrammed to attack hard to treat Hodgkin lymphoma with remarkable results.

In an early-phase clinical trial, whose results are published in the *Journal of Clinical Oncology*, researchers at UNC Lineberger and the Baylor College of Medicine demonstrated that CAR-T immunotherapy, which attacks cancer cells using a person's reprogrammed immune cells, was both safe and highly effective for patients with relapsed/refractory Hodgkin lymphoma. The treatment led to the complete disappearance of tumor in the majority of patients treated at the highest dose level of therapy, with almost all patients having clinical benefit after treatment.

One of the study's leaders is UNC Lineberger's **Natalie Grover, MD**, who was recruited using UCRF resources.

"Lymphodepletion prior to CAR-T cell infusion seems to produce a more favorable environment for the CAR-T cells to proliferate and attack their cancerous targets," said Grover, the study's co-first author and an assistant professor of medicine at the UNC School of Medicine.

"This is particularly exciting because the majority of these patients had lymphomas that had not responded well to other powerful new therapies," said study senior author and UNC Lineberger member Barbara Savoldo, MD, PhD, professor in the Department of Microbiology and Immunology at the UNC School of Medicine.

The researchers hope to do further studies of the CAR-T therapy alone and in combination with other new immune-modulating anticancer drugs.

**Grover**

# Biology of Cancer course highlights health disparities, career opportunities in cancer

A new collaboration between UNC Lineberger, North Carolina Central University (NCCU) and North Carolina A&T (NC A&T) State University is giving undergraduate students a glimpse into cancer as a career field while helping them learn more about health disparities that lead to worse cancer outcomes for African Americans and other people of color.

The Biology of Cancer: Exploring the Role of Race, Class, and Socioeconomics in the Underserved and the Underrepresented, is a semester-long course that primarily introduces students attending the above-mentioned historically Black colleges and universities (HBCUs) to cancer research, treatment and public health topics. The live webinar series, which launched in the fall 2020 semester and is available for course credit at NC A&T, is free and open to any major as well as the general public and features cancer biologists, physicians and other public health experts and specialists.

Co-creators Antonio T. Baines, PhD, a NCCU associate professor of biological and biomedical Sciences and UNC Lineberger member with expertise in pancreatic cancer research; Checo J. Rorie, PhD, interim chair of the Department of Biology at NC A&T and associate professor of genetics with expertise in breast cancer health disparities; and UNC Lineberger's Bernard Weissman, PhD, professor of pathology and lab medicine and pediatrics at UNC School of Medicine; and a planning committee of faculty and staff from all three campuses brainstormed topics and speakers for the course. Baines and Rorie delivered the

first two talks.

"We wanted to talk about cancer, of course, but we wanted to focus in on issues of why cancer seems to impact minority communities the way it does – a big part of it is environmental, and wrapped around structural racism," Baines said. "So, this class is very timely, with everything that is going on right now in the discussions about race, and the students have really connected with this course."

The lecture series has attracted large, engaged audiences – ranging from 75 to 185 attendees per event, including

***"... we wanted to focus in on issues of why cancer seems to impact minority communities the way it does – a big part of it is environmental, and wrapped around structural racism."***

- Antonio Baines, PhD

undergraduate students, graduate students, clinicians and researchers, faculty and students from other institutions, lecturers' friends and family members, and members of the general public. Post-lecture question and answer sessions have lasted as long as an hour.

"There are not a lot of opportunities for an undergraduate student to take a course on cancer, so this gives them a broad overview of it in a different setting – it's not a traditional seminar,

Baines

Rorie

Weissman

but more of a conversation," Rorie said. "We are also looking at this as a way to potentially recruit students to look at cancer as a career – whether it's in research, medicine, policy, public health – there is a wide range of career opportunities in cancer as a field."

In addition to discussing cancer disparities, each speaker is asked to share about themselves and their career path. "Hearing these great scientists discuss their journey, and what they've learned along the way, may help attract more students into this field," Weissman said. "If we're lucky, 10 years from now we are hiring some of these students as junior faculty and maybe it's because this course got them interested in cancer."

The course planning committee is already talking about next steps – expanding the series to other HBCUs, adding new topics and speakers, and soliciting feedback from students. They had hoped to bring participating students to UNC Lineberger for a visit after the fall lecture series ends, but those plans may switch to a virtual visit due to COVID-19.

"This has been a great collaboration among a lot of people at all three institutions," Baines said. "It has been a true team effort."

## UNC Lineberger's Adolescent and Young Adult cancer program celebrates five years, looks toward the future

Sophie Steiner was in ninth grade when she was diagnosed with a germ cell tumor in 2012. Receiving her care at the N.C. Cancer Hospital and UNC Children's Hospital, she felt out of place between pediatric cancer patients and adult patients, and noticed that supportive care services such as yoga and massage were only offered to adult patients. Sophie saw that teen cancer patients needed something more.

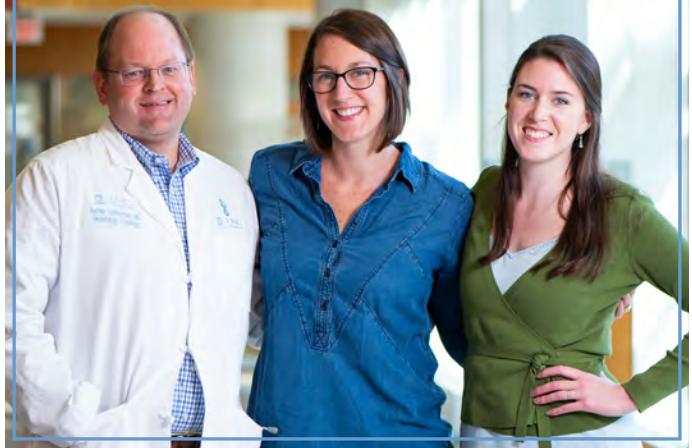

Before she passed away 18 months later, Sophie, 15, asked her family to help address the care and support shortcomings that adolescents and young adults – ages 13 to 39 – often experience during cancer treatment. Her heartfelt request led her family to establish the Be Loud! Sophie Foundation in 2014. A year later, the foundation's partnership with UNC Lineberger led to the creation of UNC's Adolescent and Young Adult (AYA) Cancer Program and the hiring of Lauren Lux, LCSW, to oversee it.

"We've had a lot of success in a fairly short amount of time for a culture change, and we'd really like to refine what we do and make it more efficient and effective," Lux said. "Close to 500 new 13- to 39-year-olds are diagnosed and treated at UNC every year, so that's a lot of people to try and meet. Trying to figure out how best to do that is something we're really interested in."

The foundation, which has raised more than \$1.2 million since its creation, provides ongoing support toward the AYA program's annual cost and is working toward funding a permanent endowment. And in the five years since its creation, thanks to continued funds from the foundation and significant investments from UNC Lineberger and specifically the UCRF, the AYA program has grown, too – expanding to a four-person staff that has strengthened the program's ability to provide patient services, do educational outreach, and conduct research that will benefit future AYA patients and their families.

"Learning more about the long-term effects of cancer therapy, and cancer itself, on survivors is critical, especially these young people as they are transitioning from active treatment to survivorship," said AYA Medical Director Andrew Smitherman, MD, MSc, who provides patient care and studies survivorship care and care outcomes. "We

Left to right: Andrew Smitherman, MD, MSc, Lauren Lux, LCSW, and Catherine Swift, LCWSA.

want to be sure we address what they need to live happy, healthy lives moving forward and, at the same time, we want to investigate ways to identify, or risk stratify, patients who will need more support during that transition."

In addition to Smitherman, Catherine Swift, LCWSA, and Melissa Matson, MSN, RN, have joined the program in recent years. The AYA program is adding new services like the development of an AYA advisory council, which allows patients to speak directly about their needs, and a survivorship clinic that provides support after treatments have ended.

The AYA program also is working to promote greater clinical research participation within this age group. Young adults historically have been underrepresented in clinical research, and increasing enrollment numbers could lead to advances in care.

Using Be Loud! Sophie funding, UNC Lineberger, Wake Forest Baptist Health Comprehensive Cancer Center and Duke Cancer Institute host an annual statewide symposium to bring together clinicians and researchers interested in improving care for the AYA population. The program aims to take further steps to expand its reach beyond Chapel Hill, offering support to patients across the state and helping educate providers who will be caring for them.

## **Building stronger community engagement and outreach across NC**

With research and outreach efforts in all 100 counties in North Carolina, UNC Lineberger has a long history of serving the state through clinical care, research policy and community engagement. UNC Lineberger's Office of Community Outreach and Engagement was launched last year to build on this work and to boost community involvement in improving cancer outcomes for all North Carolinians.

"We have multiple decades' worth of history as a cancer center doing so much of this work across cancer communities," said **Stephanie Wheeler, PhD, MPH**, associate director of Community Outreach and Engagement at UNC Lineberger. "But what we needed was more of an organizing structure to these efforts, and that's why this office was created – to help us coordinate and bring together the researchers all across the cancer center who are doing work to serve the same mission."

Wheeler – whose research focuses on addressing the needs of underserved populations across North Carolina – leads the Office of Community Outreach and Engagement along with assistant directors **Barbara Alvarez Martin, MPH**, and **Marjory Charlot, MD, MPH, MSc**. They recruited additional staff and established a Community Advisory Board – a group of diverse North Carolinians with an interest in improving cancer outcomes – to offer direction and support and to help UNC Lineberger build stronger relationships in the communities it serves.

Together, the team developed a four-pronged vision and a mission for the office: Monitoring the state's cancer burden and identifying disparities in cancer treatment and outcomes; engaging diverse stakeholders at UNC-Chapel Hill and across the state in addressing and reducing the cancer burden; amplifying existing outreach and supportive care efforts; and facilitating impactful cancer research in North Carolina and beyond.

One important way to reduce cancer disparities is by making sure clinical trials more accurately represent the patient population. While people identifying as African-American represent 22% of North Carolina's population, 18% of people recruited to interventional treatment trials at UNC Lineberger identified as African-American. And while that is a better percentage than most of the nation's cancer centers, as the public comprehensive center for North Carolina, UNC

Lineberger is investing to do even better.

Charlot, a medical oncologist who treats patients with lung cancer, is leading an ongoing initiative that focuses on patient and community engagement to enhance cancer clinical trial participation among underrepresented minority populations. "One of our goals in the Office of Community Outreach and

Engagement is to ensure that the representation of our patients on clinical trials mirrors the demographics of North Carolina," she said.

Several UNC Lineberger research projects have partnered with community organizations in working to reduce disparities in cancer outcomes, including:

**Wheeler**

**Charlot**

**Alvarez Martin**

- Wheeler's work through the Carolina Cancer Screening Initiative, led by UNC Lineberger's **Daniel Reuland, MD, MPH**, helps to boost colorectal cancer screening in underserved areas of the state.

- Wheeler and UNC Lineberger's **Don Rosenstein, MD**, are implementing financial navigation intervention program aimed at helping rural oncology practices across North Carolina address their cancer patients' unmet financial needs.

- ACCURE, or Accountability for Cancer Care through Undoing Racism, is a multi-faceted intervention developed with the Greensboro Health Disparities Collaborative to ensure patients completed treatment for early stage breast and lung cancer. Results of the ACCURE study, led by UNC Lineberger's **Samuel Cykert, MD**, showed this effort eliminated disparities in treatment completion rates between white and Black patients over the course of the study.

- Trimming Risk in Men, led by UNC Lineberger's **Laura Linnan, ScD**, used barbershops in North Carolina as a platform to educate men about prostate cancer and colorectal cancer risk as part of an effort to address disparities for Black men.

A key reason these studies succeeded was because they partnered with the communities they served, Martin said. "UNC Lineberger is such a valued resource in this state," she said. "It's important for us to remember that community partners also have a lot to offer the cancer center. The benefits flow in both directions. If we're looking for innovative ways to reduce cancer outcomes, let's look to the community for ideas and inspiration. They are the ones we are serving."

## **Research Priority 1: Genetics in Cancer Causation and Treatment**

### **Pancreatic cancer tumor classification could optimize treatment decisions**

UNC Lineberger members have reported research findings that could help predict resistance to treatments for pancreatic cancer, which could lead to tailored – and more effective – therapies based on cancer subtypes.

In the journal Clinical Cancer Research, researchers led by UNC Lineberger's Jen Jen Yeh, MD, and Naim Rashid, PhD, reported that two subtypes of pancreatic cancer respond differently to treatments. One subtype showed poor responses to common therapies and had worse survival outcomes.

Pancreatic cancer is one of the deadliest cancer types, with less than one in 10 patients surviving five years after diagnosis. The disease is typically diagnosed in later stages, when the cancer has already spread. "We want to know what therapies are best for the patient so that we can maximize response and quality of life," said Yeh, a professor of surgery and pharmacology and vice chair for research in the UNC School of Medicine Department of Surgery. "For pancreatic cancer, where time is more limited, this becomes even more important."

In 2015, Lineberger researchers discovered two major subtypes of pancreatic cancer, while other researchers reported classification systems with three or four subtypes. Given this lack of consensus, the new study analyzed data

**Yeh**

**Rashid**

from two recent clinical trials for pancreatic cancer to better understand which tumor classifications aligned with treatment responses.

"Our study evaluated the best way to classify tumors according to available treatment response data from prior clinical trials," Yeh said. "Our hope is that we can use this information to tailor treatments, and potentially avoid giving therapies that may not work well for certain patients."

The study found that the two-subtype classification best aligned with treatment outcome data from two clinical trials. And, after analyzing five independent pancreatic cancer studies, researchers also found that the two-subtype system best explained differences in overall patient survival, with patients classified as having basal-like tumors showing much poorer response rates to treatments, and worse survival outcomes, than the other subtype.

Yeh and Rashid also utilized machine learning to simplify and adapt their two-subtype classification method so it can be used in the clinic, and used to generate subtype predictions for a single patient. They are working with recent UCRF recruit, Jason Merker, MD, PhD, a molecular pathologist, to bring their classification algorithm into a form that can be used in future clinical decision making. A new trial will continue the study of how the two tumor subtypes can predict a patient's response to treatment, and to understand why the two subtypes differ. The latter information will inform the next wave of treatment innovations.

**Merker**

"We want to use the prediction model we developed in actual trials to ensure patients are placed on optimal therapies up front in order to enhance survival and other outcomes," Rashid said.

***"Our hope is that we can use this information to tailor treatments, and potentially avoid giving therapies that may not work well for certain patients."***

- Jen Jen Yeh, MD

## **Findings could help identify which aggressive breast cancers will respond to immune treatments**

The U.S. Food and Drug Administration recently approved a chemotherapy-immunotherapy drug combination to treat an aggressive type of breast cancer, but response to this treatment has varied in clinical studies. UNC Lineberger researchers believe they have discovered biological clues that can help identify which tumors might respond to the combination treatment.

Their findings, published in the journal *Cell*, were drawn from studies in mice and an analysis of data from six clinical trials. If confirmed in future studies, the insights could help guide patients to the right treatments, sparing them from those that are not effective. It also could lead to an approach to make the drugs work in cancers that don't initially respond.

"Potentially, we have a new biomarker to be used to figure out which triple negative breast cancer patients should be receiving immunotherapies," said UNC Lineberger's **Charles M. Perou, PhD**, the May Goldman Shaw Distinguished Professor of Molecular Oncology Research and professor of genetics and pathology.

Triple negative breast cancer accounts for about 12% of invasive breast cancer cases in the United States. It is more likely to affect younger women, Black women and people who have a BRCA1 mutation. Because this subtype lacks three receptors that typically guide therapy, doctors typically have used chemotherapy, which bluntly attacks rapidly dividing cells in the body, to treat it.

The FDA approved the use of atezolizumab, which frees up immune cells called T-cells to find and attack cancer cells, in combination with chemotherapy for patients with triple negative breast cancer that has metastasized and that is positive for the PD-L1 protein. It was the first time the FDA approved a breast cancer treatment that included immunotherapy.

In a New England Journal of Medicine study, the atezolizumab-chemotherapy regimen led to prolonged progression-free survival for some patients. Forty-one percent of patients with triple negative breast cancer were PD-L1 positive, but not all of the tumors responded to the

**Perou**

combination therapy.

To study why some triple negative breast cancers respond to immunotherapy and others do not, Perou and his colleagues created multiple mouse models of triple negative breast cancer and used genetic tools to define the biological features of breast tumors that do respond

to the treatment. They found an important genetic clue: The patients whose cancer responded had a coordinated immune response to the cancer that involved multiple types of immune cells – including both T-cells, which can directly attack and kill tumors, and B-cells, which make antibodies that aid in the attack of tumor cells.

"Our work going forward right now is to look for ways to leverage B-cells to improve treatment plans and regimens for breast cancer patients," said **Dan Hollern, PhD**, the first author of the study and a postdoctoral research associate at UNC Lineberger. "We definitely need to be looking at ways to activate B-cells more effectively with our therapies."

## **Study explores clocking DNA's recovery time after chemotherapy**

Cells damaged by chemotherapy can almost completely fix their most important DNA in as quickly as two days, according to a study published in the *Journal of Biological Chemistry* by Nobel laureate and UNC Lineberger member **Aziz Sancar, MD, PhD**.

In normal cells, the circadian clock drives the rhythm of DNA repair, but this is not the case in tumors. "Most cancers do not have a functional clock and so, basically any time that it's good for the normal tissue, you can hit the cancer," said Sancar, the Sarah Graham Kenan Distinguished Professor of Biochemistry and Biophysics.

**Triple negative breast cancer accounts for about 12% of invasive breast cancer cases in the United States. It is more likely to affect younger women, Black women and people who have a BRCA1 mutation.**

**Sancar**

Cisplatin, a widely used chemotherapy drug for numerous cancers, often comes with serious side effects including kidney, liver and peripheral nerve injury. Since cisplatin kills both cancer and healthy cells by damaging their DNA, Sancar and his team aimed to learn more about the timing of DNA repair in healthy cells to help determine when might be the best time to administer cisplatin.

Using a technique they developed to capture and sequence fragments of damaged DNA from mice injected with cisplatin, they examined DNA recovery based on a typical clinical chemotherapy schedule, in which patients are given a dose and at least a week to recover before receiving another dose. Over the course of 70 days, researchers mapped where and when DNA damage was fixed.

They found that the DNA of transcribed genes was just about fully mended in two circadian cycles. Restoration of these genes composed the majority of repair during the first 48 hours but afterward, repair of nontranscribed DNA became dominant and proceeded for weeks. The remaining damage in nontranscribed DNA is not harmful in normal cells that aren't replicating, Sancar said. But for cancer cells which divide uncontrollably, this damage could lead to cell death.

This new information about the timetable of DNA repair could, after further study, eventually aid the design of successful chronochemotherapies, treatment strategies that aim to administer chemotherapy at times that maximize tumor damage while minimizing toxic side effects.

## ***Using genetic insights to develop model for HPV-linked head and neck cancer***

A UNC Lineberger-led research team has created a genetically engineered mouse model of head and neck cancers linked to HPV (human papillomavirus) that will

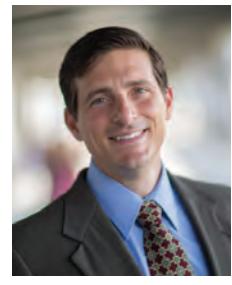

help improve laboratory tools for studying the disease.

Their findings, published in *Cell Reports*, include the discovery that different subtypes of HPV-linked oropharyngeal squamous cell carcinoma exist based on the expression levels of two different viral genes. HPV is a common virus that's responsible for nearly a third of squamous cell carcinomas of the head and neck, including the oropharynx, the larynx and the oral cavity.

"By creating a model of HPV-linked head and neck cancer that faithfully reflects the biology of the disease, we can use this to better understand the molecular mechanisms that cause this cancer," said Lineberger member **Antonio Amelio, PhD**, an assistant professor in the UNC Adams School of Dentistry Division of Oral and Craniofacial Health Sciences and UNC Lineberger's Cancer Cell Biology Program.

In a study funded in part by the UCRF, Amelio and his colleagues identified the two new subtypes based on how much of the viral genes E6 and E7 are expressed in infected cells. The proteins encoded by E6 and E7 remove certain checks and balances that are present in human cells to prevent unregulated growth. Previous studies had verified the presence of E7, but the newly published research found that E6 is also present and that both HPV genes need to be activated to cause oropharyngeal cancer.

The researchers discovered the two subtypes using data from a large genetic analysis of HPV-linked oropharyngeal cancer completed as part of a collaborative national project known as The Cancer Genome Atlas (TCGA). UNC Lineberger members held several leadership roles in TCGA, and UNC Lineberger served as a genetics center for the project.

**Amelio**

## Research Priority 2: Developing Novel Therapeutics

### **Combination therapy shows promise in head and neck cancers**

A study by UNC Lineberger's Jared Weiss, MD, has yielded encouraging preliminary results for combining immunotherapy and radiation therapy for patients with locally advanced head and neck cancer.

The study evaluated a combination of radiation and pembrolizumab – an immunotherapy drug known as a “checkpoint inhibitor” that releases immune cells to find and attack tumors – that researchers believe could offer a new treatment option for patients who are ineligible for cisplatin chemotherapy, part of standard treatment for the disease.

The single-arm phase II trial included 29 patients with locally advanced head and neck squamous cell carcinoma. The trial was designed specifically for patients who normally would receive platinum chemotherapy together with radiation, but may not be able to tolerate its side effects.

Side effects could occur due to preexisting hearing problems that place patients at risk of permanent hearing loss. Additionally, preexisting kidney and nerve damage tend to be aggravated by cisplatin and place patients at risk for permanent side effects.

“That is a common dilemma in the exam room because cisplatin, while effective, tends to be particularly toxic for patients and can lead to permanent side effects for some,” said Weiss, associate professor of medicine in the Division of Oncology. “I will have patients I want to treat with platinum chemotherapy, but I also want to align treatment with their values. Is the patient willing to accept a risk of deafness or exacerbated ringing in their ears? These are not acceptable consequences for most people.”

Patients were treated with three cycles of pembrolizumab and concurrent radiation therapy over six weeks, followed by three additional cycles of the immunotherapy drug. At

Weiss

follow-up, 76% of patients had no progression a year later and the survival rate was 86%.

“There are convincing arguments that radiation sensitizes patients to immunotherapy and can enhance its effects,” said Weiss, who cautioned that findings need to be confirmed in a randomized trial before the combination would be recommended to patients. “And the opposite direction also seems to be true – radiation therapy needs a functional immune system to work, and our hope was that pembrolizumab would make radiation more effective for these patients.”

### **UNC Lineberger team identifies key gene in myeloma progression, potential treatment**

UNC Lineberger researchers have discovered a gene that plays a key role in the development and progression of multiple myeloma – along with a potential treatment strategy to block the gene’s effects.

In the journal Blood, UNC Lineberger's Greg Wang, PhD, associate professor in biochemistry and biophysics, and colleagues reported that a gene called PHF19 fuels the development and progression of multiple myeloma, a disease where plasma cells grow out of control. They also found that an experimental therapeutic, UNC1999, showed early promise in laboratory models of multiple myeloma.

Wang

“We identified a crucial cancer-promoting pathway in multiple myeloma, and we have promising evidence for a potential new way to treat this type of blood cancer,” Wang said.

Multiple myeloma is a blood cancer that develops in plasma cells, which are immune cells that generate antibodies against invading diseases. Analyzing data from multiple clinical trials, researchers in Wang’s lab found that high expression of PHF19 was linked with poorer prognosis. Using state-of-the-art genetic tools, Wang and his team demonstrated

***“We identified a crucial cancer-promoting pathway in multiple myeloma, and we have promising evidence for a potential new way to treat this type of blood cancer.”***

- Greg Wang, MD

how PHF19 affects the progression of myeloma and how, when it mutates, it hyperactivates a protein group that drives multiple myeloma. They also found a small molecule inhibitor that can block part of protein group, which significantly delayed tumor progression in animal models of the disease.

Wang said the researchers will continue to study the underlying mechanisms behind these proteins and this cancer type, and will work to develop even better inhibitors to suppress the action of the protein group and PHF19.

## **UNC discovery would allow doctors to fine-tune cancer-hunting immune cells**

A discovery by UNC Lineberger researchers could allow scientists to fine-tune genetically engineered immune cells to heighten their killing power against tumors or to decrease their activity level in the case of severe side effects.

Led by UNC Lineberger's **Gianpietro Dotti, MD**, researchers reported in *Cancer Cell* new findings about the regulation of co-stimulatory molecules that could be used to activate cancer-killing immune cells – chimeric antigen receptor T-cells, or CAR-T cells – or decrease their activity.

"In immunology, it's always about balance; you don't want to have too much T-cell activation, and you don't want T-cell activation to be too low," said **Peishun Shou, PhD**, postdoctoral research associate at UNC Lineberger and the study's co-first author.

Cellular immunotherapy, or CAR-T immunotherapy, involves extracting specific immune cells from patients, engineering the cells in the lab to hunt tumor cells displaying a specific molecular target, and then infusing them back into patients to fight their cancer. Through UNC Lineberger's Cellular Immunotherapy Program, researchers have designed novel investigational CAR-T therapies for Hodgkin and non-Hodgkin lymphoma, multiple myeloma, neuroblastoma and leukemia.

"We are conducting and developing clinical studies with CAR-T cells in both liquid and solid tumors. In these studies, we are testing what we call the 'new generation' of CAR-T cells, hoping to further enhance the therapeutic index of this technology," said Dotti, a professor in the UNC School of Medicine Department of Microbiology and Immunology and director of the UNC Lineberger Cellular

Dotti

Immunotherapy Program. "This latest study highlights how when translational and basic science come together, we can hopefully improve therapeutic strategies."

The researchers revealed new strategies for improving two different types of modified T-cells. One type of CAR-T is co-stimulated by the CD28 protein, and another is stimulated by 4-1BB. Since each type of CAR-T has differences in terms of how long it typically lasts in the body to fight cancer, how quickly it responds and the strength of its response, Dotti and colleagues wanted to find a way to regulate these proteins to fine tune the cells' disease-fighting response.

For CAR-T co-stimulated by 4-1BB, scientists found they could increase expression of a specific molecule, the LCK molecule, to increase the cells' activity. For CAR-T co-stimulated by CD28, they discovered a new "safety switch" mechanism – a drug that binds a molecule called SHP1 in the T-cell – that could reduce activity of CAR-T if patients experience severe side effects from the experimental therapy.

Researchers want to investigate using these findings to improve CAR-T treatments against blood cancers like leukemia, and to potentially improve experimental treatments for solid tumors. "Researchers in the CAR-T immunotherapy field now want to solve the solid tumor problem," Shou said.

## **UNC discovers possible approach to block growth of common pediatric brain cancer**

UNC Lineberger researchers have identified a potential approach to stop the growth of medulloblastoma, the most common type of brain tumor in children. **Timothy Gershon, MD, PhD**, and colleagues reported in the journal *Development* that by blocking a signal called GSK-3, they could control tumor growth in a subtype of the cancer.

About 80% of children with medulloblastoma survive long-term with radiation and chemotherapy, but improvements are needed to limit debilitating side effects and to develop effective treatments for children whose cancer doesn't respond to standard radiation and chemotherapy.

Gershon

"This work could lead to new insights into developmental brain malformations and also to new treatments for medulloblastoma that may spare the severe side effects of radiation and typical chemotherapy," said Gershon, an associate professor of

neurology. “Our goal would be to find ways to treat the disease that would provide fewer side effects.”

In laboratory studies using mice and cells, the researchers focused on a tumor subtype that accounts for one third of medulloblastoma brain tumor cases. “For one of the more common subtypes of medulloblastoma, we found we can target a signaling pathway to block tumor growth,” said Jennifer Ocasio, PhD, the study’s first author and a former graduate student in the UNC School of Medicine Neuroscience Curriculum. “We think this would be a way

to sidestep effects of radiation and chemotherapy that have a lot of side effects because we are blocking growth rather than killing these cells.”

The researchers said their findings were surprising because other studies have shown that blocking GSK-3 actually stimulates growth in other parts of the brain. They caution that while this treatment might be promising for a specific subtype of medulloblastoma, it could drive growth in other brain cancers, including other medulloblastoma subtypes.

### **Research Priority 3: Outcomes**

#### **Major population-based study tracks endometrial cancer across North Carolina**

UNC Lineberger researchers have launched a major research initiative to track 1,000 women across North Carolina with endometrial cancer, which is cancer in the lining of the uterus, to better understand why incidence and mortality rates are increasing and why the disease is more deadly for some women than others.

In the Carolina Endometrial Cancer Study, Victoria Bae-Jump, MD, PhD, and her colleagues will investigate factors contributing to these statistics, including patients’ medical history and lifestyle. They will also evaluate the genetic mutations in a patient’s tumor in order to potentially identify therapeutic strategies. Not only do researchers want to understand why the disease is becoming more prevalent and mortality rates have increased, but also why mortality rates are higher in Black women compared with white women.

“Despite being the fourth most common cancer in women, endometrial cancer has been a long under-studied cancer,” said Bae-Jump, professor of gynecologic oncology at the UNC School of Medicine. “We need to spend more time and research dollars trying to figure out this cancer.”

Between 2013 and 2017, uterine cancer mortality rates increased by an average annual rate of 2%, representing the largest increase for any cancer in women. It is one of the only cancers in the United States with an increasing incidence. Researchers also found that Black women have a

**Bae-Jump**

higher risk of death from this disease, both nationally and in North Carolina. Compared to other racial and ethnic groups, Black women have a 93% higher five-year mortality rate. In North Carolina, Black women have a more than two-fold risk of death.

In her laboratory, Bae-Jump is developing mouse models of endometrial cancer using tumor tissue from patients in order to study genetic differences in the cancer of Black and white women. She hopes to identify potential new treatments and to understand what may be contributing to rising mortality rates as well as racial disparities. “Endometrial cancer does harbor one of the worst disparities for African-American women,” she said. “If we know what the differences are, we could target those with therapy.”

Bae-Jump is investigating several factors that could be contributing to the disparity for Black women, including the presence of other diseases such as diabetes, and a lack of information on molecular subtypes of disease. When she reviewed existing studies that analyzed tumors to find what may be contributing to the disparity at the level of the gene or protein, she found Black women were under-represented in those studies.

**Researchers want to understand why the disease is becoming more prevalent and mortality rates have increased, but also why mortality rates are higher in Black women compared with white women.**

That's why the Carolina Endometrial Cancer Study, which is funded with about \$1.7 million from UNC Lineberger, is so important. The study is modeled after the nation-leading Carolina Breast Cancer Study, a decades-long population study of thousands of North Carolina women. The CBCS has revealed genetic insights that have helped researchers pinpoint reasons contributing to health disparities among breast cancer patients, leading to more effective treatments.

The Carolina Endometrial Cancer Study will investigate the molecular alterations in endometrial tumors with the goal of uncovering what may be driving more aggressive behavior or lead to worse outcomes, as well as how treatment, access to care and follow-up are all delivered. They also will evaluate the microbiome – or the naturally occurring micro-organisms present in people – that might play a role in disease outcomes. And ultimately, they believe they will uncover new ways for drug targets to improve treatment.

"We are going to look at the genomic differences on a greater scale than has ever been done before," Bae-Jump said.

## Breast cancer treatment costs highest among young women with metastatic cancer

For metastatic breast cancer patients – especially young women – the financial costs for treatment are much higher than for earlier-stage cancer patients, a new study by UNC Lineberger researchers has found.

The findings, published in the journal *Breast Cancer Research and Treatment*, showed that women aged 18–44 with advanced cancer had the largest expected costs; the incremental average monthly treatment cost for this group was \$4,463 compared to monthly costs of \$2,418 for stage 1 cancer. Breast cancer in younger women is typically diagnosed at more advanced stages, is more aggressive and less responsive to treatment.

Wheeler

By identifying the age groups and phases of care where medical costs are the highest, the results of this study may inform decision makers about where to invest resources – for example, which groups of patients may be in need of extra financial or psychological support.

"Our results highlight the tremendous cost burden associated with metastatic breast cancer among working-age women, particularly during the years after initial treatment of metastatic disease as well as at the end of life," said UNC Lineberger's **Stephanie Wheeler, PhD, MPH**, professor of health policy and management at the UNC Gillings School of Global Public Health.

Women living in North Carolina and treated for breast cancer between 2003 and 2014 were included in the study, which was funded by the U.S. Centers for Disease Control and Prevention. In the study group, 4,806 had metastatic breast cancer, meaning it had spread to other parts of the body, and 21,772 had non-metastatic cancer. The patient data was generated from UNC Lineberger's Cancer Information & Population Health Resource (CIPHR), a "big data" tool funded by the UCRF that links information on more than 500,000 cancer patients in North Carolina. Researchers used statistical modeling based on insurance claims data to estimate medical costs for these patients.

For women with metastatic breast cancer where the five-year survival rate is only 26.3% compared to 98.8% for localized cancer, treatment continues for longer, and it includes end-of-life care. These factors contribute to the high medical costs associated with metastatic breast cancer, which can be a financial burden for women and their families.

The finding that medical costs are higher for younger and middle-age women may reflect their desire for more aggressive treatment and willingness to pay for additional months of life, researchers said, or it may reflect breakdowns in shared decision making between patients and practitioners, leading to treatments with minimal financial and health benefits for patients.

**For women with metastatic breast cancer where the five-year survival rate is only 26.3% compared to 98.8% for localized cancer, treatment continues for longer, and it includes end-of-life care. These factors contribute to the high medical costs associated with metastatic breast cancer, which can be a financial burden for women and their families.**

"Our results suggest that we spend nearly twice as much in the last year of life for women that die of breast cancer compared to other causes of death," said UNC Lineberger's **Justin Trogdon, PhD**, professor of health policy and management at UNC Gillings. "We should work to ensure that end-of-life spending for metastatic breast cancer represents women's preferences and is of high value."

## **UNC panel issues recommendations for state response to suspected cancer cluster**

Concerns about suspected cancer clusters in two North Carolina communities led the General Assembly to direct the North Carolina Policy Collaboratory, based at UNC-Chapel Hill, to create an advisory panel of experts to develop strategies for assessing cancer incidence and mortality rates and patterns over time and geography. UNC Lineberger's Office of Community Outreach and Engagement provided significant support of the panel's meeting logistics and report development.

The 22-member panel is chaired by **Andrew Olshan, PhD**, associate director of population sciences at UNC Lineberger and the Barbara S. Hulka Distinguished Professor of Epidemiology at the UNC Gillings School of Global Public Health, and includes epidemiologists, clinicians, and environmental scientists from five universities, the Iredell County Health Department, the Centers for Disease Control and Prevention, the National Cancer Institute, and the NC Department of Health and Human Services.

The panel held five meetings during the course of four months. Based on their discussions and the information they compiled, the panel members proposed five recommendations to improve how the state investigates a potential cancer cluster:

1. Improve the communication process by identifying one single point-of-contact person for local health departments, community members and other stakeholders
2. Invest in more robust infrastructure to strengthen coordination and implementation of cancer cluster investigations across the state

**Olshan**

3. Enhance cancer data resources and analytical capabilities for cancer cluster surveillance
4. Develop a NC Environmental Public Health Tracking Web-Portal
5. Convene a cancer cluster advisory committee

The recommendations are a response to concerns about two suspected cancer clusters: one for thyroid cancer in Iredell County, NC, and one for ocular melanoma near Huntersville, NC. A cancer cluster is a greater than expected number of cancer cases within a group of people in a geographic area over a defined period of time.

"Cancer clusters provide a wide array of challenges, ranging from the appropriate approach to determining if an increase in cancer cases in an area, especially one with a small number of cancer cases, is meaningful to conducting a robust investigation to determine possible causes," Olshan said. "The panel was presented with a tall order, and I believe it has provided an excellent framework and series of diverse and impactful recommendations to help local and state officials to better address cancer cluster investigation in North Carolina."

## **Five-year survival improves for certain cancers in adolescent and young adults**

The five-year survival rate for adolescents and young adults with cancer has significantly improved from 1975 to 2005 in the United States overall, but this was not the case for all cancers, UNC Lineberger researchers have revealed in the Journal of the National Cancer Institute.

The researchers identified substantial improvements in five-year mortality rates for adolescents and young adults (AYA) diagnosed with leukemia, non-Hodgkin lymphoma, Hodgkin lymphoma, central nervous system tumors, melanoma and other skin cancers, breast cancer or kidney cancer.

**Nichols**

"Some of the most dramatic improvements were for leukemia and non-Hodgkin lymphoma," said UNC Lineberger member **Hazel B. Nichols, PhD**, the study's senior author and associate professor in the UNC Gillings School of Global Public Health. "In those groups, we saw that if you were diagnosed with leukemia, for example, in 1975, the mortality between five and 10 years was almost 30%. If you were

diagnosed with that same disease in 2005, the mortality rate was only 7%. That's pretty dramatic over a 30-year interval."

However, while mortality rates improved overall, there was no major improvement in five-year mortality rates for AYA patients with bone tumors, soft tissue sarcomas, bladder cancer, cervical and uterine cancers, or colorectal cancer. "This highlights areas where more work needs to be done," Nichols said.

Cancers among adolescents and young adults make up only about 4% of the 600,000 cancers diagnosed in the United States yearly, researchers reported. But that is still a heavy burden considering the potential for years of life lost. Studies previous to this one had indicated that survival improvement has been less dramatic in this age group.

"Cancer risk is still very low overall before 40," Nichols said. "However, we haven't seen strong representation of adolescents and young adults in clinical trials, which may be contributing to the fact that patients with certain cancer types in this age group haven't made big advancements over this time period."

## **Researchers report favorable survival, fewer side effects after reduced therapy for HPV-linked head and neck cancer**

Reducing the intensity of radiation treatment for patients with human papillomavirus-associated head and neck cancer produced a promising two-year progression-free survival rate and resulted in fewer side effects, UNC Lineberger researchers have discovered.

"A simple de-intensification strategy of reducing radiation and chemotherapy appears to be as effective at cancer control as the standard seven-week regimen," said UNC

Lineberger's **Bhishamjit S. Chera, MD**, associate professor in the UNC School of Medicine Department of Radiation Oncology. "Furthermore, there were fewer toxicities."

The findings, published in the *Journal of Clinical Oncology*, were drawn from a phase II clinical trial that included 114 patients with HPV-linked head and neck cancer and a limited smoking history. Patients received six weeks of treatment, including a reduced intensity of radiation therapy of 60 Gray with weekly low-dose chemotherapy of cisplatin. The standard of care regimen is seven weeks of treatment 70 Gray and high-dose chemotherapy.

**Chera**

Researchers found the two-year progression-free survival was comparable to other studies using standard treatment doses (86% compared to 87%). They also found that major long-term side effects of radiation treatment – dry mouth and problems swallowing and dry mouth – were not as severe. In previous studies, the majority of patients treated with standard chemoradiotherapy require a temporary feeding tube and some have significant long-term swallowing problems. After the de-intensified treatment, patients reported that swallowing returned to normal and only 34% required a temporary feeding tube.

The results need to be validated in larger, randomized clinical trials but the benefits with respect to quality of life are clearly worth exploring. In addition, researchers want to identify additional biomarkers to drive precision medicine strategies that can continue to improve two-year progression-free response rates while achieving better side effect results.

***Researchers found the two-year progression-free survival was comparable to other studies using standard treatment doses (86% compared to 87%). They also found that major long-term side effects of radiation treatment – dry mouth and problems swallowing and dry mouth – were not as severe.***

## FACULTY IMPACT: RESEARCH AND SCIENCE

## AACR honors The Cancer Genome Atlas researchers with 2020 Team Science Awards

The American Association for Cancer Research honored The Cancer Genome Atlas (TCGA), the landmark study that brought together researchers from across the globe to develop genomic profiles of 33 major cancers, with two 2020 AACR Team Science Awards – one recognizing the TCGA’s founding leaders and members, including Lineberger member Charles M. Perou, PhD, and the other honoring members of the current TCGA project team, including UNC Lineberger’s Katherine A. Hoadley, PhD; Joel Parker, PhD; Benjamin G. Vincent, MD; and Jen Jen Yeh, MD, for their efforts to analyze the data generated by the project.

## Noar receives 5-year, \$3.35M grant to develop, test e-cigarette prevention messaging

UNC Lineberger’s Seth Noar, PhD, professor in the UNC Hussman School of Journalism and Media, has received a five-year, \$3.35 million grant from the National Institute on Drug Abuse to lead a national study to develop and test messages that discourage adolescents from using electronic cigarettes.

While cigarette smoking has declined among middle and high school students in the United States, the use of e-cigarettes and vaping among this age group has more than doubled during the past three years. Noar’s study has three goals: identify promising ways to communicate with teens to prevent e-cigarette use; develop a set of e-cigarette prevention messages that reduce adolescents’ desire to try or use e-cigarettes; and use a randomized controlled trial to evaluate whether evidence-based e-cigarette prevention messages sent daily via text message will reduce at-risk adolescents’ willingness to use e-cigarettes.

Noar

## AACR honors Spears for longtime advocacy on behalf of cancer patients

Patty Spears, chair of UNC Lineberger’s Patient Advocates for Research Council, received the American Association of Cancer Research 2020 Distinguished Public Service Award for Exceptional Leadership in Cancer Advocacy in recognition of her commitment to helping cancer patients through her work at the AACR, the American Society of Clinical Oncology, the National Cancer Institute, the Food and Drug Administration, Komen and other organizations.

As a research manager in the Office of Clinical & Translational Research in Oncology, Spears provides scientific leadership and guidance to advance translational trials and data management of the Alliance for Clinical Trials in Oncology breast cancer research trials. She also is part of the Office of Community Outreach and Engagement. A breast cancer survivor, Spears also educates cancer patients on the importance of participating in clinical trials, and advocates for the need to include patient-reported outcomes in clinical trials.

Spears

## Helping patients navigate the costs of cancer care

Stephanie Wheeler, PhD, MPH, and Donald Rosenstein, MD, were awarded a four-year, more than \$1.87 million grant from the National Cancer Institute to study the impact of implementing financial navigation services at five rural cancer centers in eastern North Carolina – an intervention designed to help patients cope with the financial burdens related to cancer care. They will use the grant funds to connect cancer patients with potential financial support resources in Carteret, Dare, Jackson, Lenoir, and Nash counties. Their goal is for the intervention to improve patient’s health and cancer treatment outcomes, as well as reduce racial and geographic inequities.

Wheeler

Rosenstein

## UNC Lineberger faculty ranked among most influential researchers

Eighteen UNC Lineberger members were recognized for being among the world's most influential researchers of the past decade. The Web of Science Group's 2019 Highly Cited Researchers list is limited to researchers who have published multiple highly-cited papers that rank in the top 1% by citations for field and year. Only about 6,200 researchers worldwide, or .1% of all researchers, were named to the list in 2019.

UNC Lineberger members named to the 2019 Highly Cited Researchers list:

Ralph Baric, PhD	David M. Margolis, MD	Barry M. Popkin, PhD
Noel Brewer, PhD	Edward A. Miao, MD, PhD	Kurt M. Ribisl, PhD
Lisa A. Carey, MD, FASCO	Piotr A. Mieczkowski, PhD	Bryan L. Roth, MD, PhD
Myron Cohen, MD	Seth M. Noar, PhD	Paschal Sheeran, PhD
Katherine A. Hoadley, PhD	Joel S. Parker, PhD	Patrick F. Sullivan, MD, FRANZCP
Leaf Huang, PhD	Charles M. Perou, PhD	Jenny P.Y. Ting, PhD

## Muss receives Visionary Leader Award for cancer care in older adults

The American Society of Clinical Oncology honored UNC Lineberger's Hyman B. Muss, MD, FASCO, the Mary Jones Hudson Distinguished Professor of Geriatric Oncology, with the 2020 Allen S. Lichter Visionary Leader Award for his career-long dedication to improving the care of older patients with cancer. His UNC research program was initiated and has been sustained with UCRF investments.

Muss, whose interest in the study and care of cancer in older adults dates back nearly 30 years, said eliminating misconceptions about older adults with cancer is a critical first step to providing them with better care. "Older people remain woefully underrepresented on clinical trials. There is a shortage of really good treatment-related data, especially for chemotherapy and radiation therapy in older patients, he said. "This generation of physicians will hopefully do the research to figure out how to provide the best treatment and UNC and our cancer center will continue to play a major role in these efforts."

Muss

## Damania elected to American Academy of Arts and Sciences

UNC Lineberger's Blossom Damania, PhD, vice dean for research and the Cary C. Boshamer Distinguished Professor of Microbiology and Immunology at the UNC School of Medicine, has been elected to the American Academy of Arts and Sciences, which was founded in 1780 to recognize artistic and scientific excellence and to convene researchers from various professions and perspectives.

One of the world's leading virology researchers and academic leaders, Damania co-directs UNC Lineberger's Global Oncology Program and the Virology Program. Her achievements include more than 140 peer-reviewed articles in major science journals. Among her scientific breakthroughs was discovering in great detail how viral proteins encoded by human oncogenic viruses take over a normal, healthy cell's machinery to transform it into a cancer cell.

Damania

## ■ Legant named 2019 Packard Fellow

UNC Lineberger's Wesley Legant, PhD, assistant professor in the UNC-NC State Joint Department of Biomedical Engineering and the Department of Pharmacology, received a prestigious Packard Fellowship to enhance his research on new kinds of microscopy techniques to further biomedical discoveries at the UNC School of Medicine and beyond.

Legant will receive \$875,000 over five years to support his research. Work in the Legant Lab spans the development of cutting-edge fluorescent microscopes, machine learning algorithms for intelligent instrument control and image analysis, and applications to fundamental biological phenomena including cell division, cell migration, and cell differentiation.

**Legant**

## ■ UNC ranked among world's top 15 institutions for cancer research publications

UNC-Chapel Hill is the 15th most productive institution in the world for publishing cancer research studies, according to Nature Index. The ranking was based on a review of more than 20,000 research articles published in 82 prominent natural-science journals from 2015 to 2019.

UNC Lineberger is the nexus of laboratory, clinical and population-based cancer research at UNC-Chapel Hill and the largest research center at university. It brings together more than 400 scientists from schools and departments across the health affairs and the college to create a greater understanding of cancer, its prevention, early detection and treatment. UNC Lineberger members are also key to UNC's nationally renowned cancer care programs.

## ■ NCI appoints Gopal director of Center for Global Health

The National Cancer Institute chose Satish Gopal, MD, MPH, one of UNC Lineberger's outstanding global health physician-scientists, to lead its Center for Global Health. Gopal led the cancer program for UNC Project-Malawi, a research and care collaboration between the University of North Carolina at Chapel Hill and the Malawi Ministry of Health, since 2012.

"The global cancer burden is enormous. About two-thirds of cancer deaths occur each year in low- and middle-income countries, and that's increasing," said Gopal, who lived in Malawi with his family from 2012-2019, caring for patients at the Kamuzu Central Hospital Cancer Clinic and leading a multidisciplinary international cancer research program. "NCI can hopefully play a key role in addressing cancer as a truly global public health problem: Studying cancer everywhere should benefit cancer patients everywhere."

**Gopal**

## Smitherman receives grant for cancer outcomes research in children and young adults

UNC Lineberger's Andrew Smitherman, MD, MSc, has received a grant from the Hyundai Hope on Wheels program to study how to identify young cancer patients who may suffer from treatment side effects later in their lives. The two-year, \$200,000 Hyundai Young Investigator Grant will support Smitherman's study of approaches to identify pediatric, adolescent and young adult cancer patients most at risk for late-stage side effects from their cancer treatments. About two thirds of pediatric and adolescent cancer survivors will develop long-term side effects from their treatment, such as second cancers, heart disease and lung disease – conditions that typically occur in among people in their 60s or 70s in the general population, but occur in young cancer survivors much earlier.

Smitherman

## Carey elected to American Society of Clinical Oncology's board of directors

The American Society of Clinical Oncology has elected UNC Lineberger's Lisa A. Carey, MD, FASCO, to its Board of Directors.

Carey, the Richardson and Marilyn Jacobs Preyer Distinguished Professor in Breast Cancer Research and the deputy director of Clinical Sciences at UNC Lineberger, began her four-year term in June.

Carey is a member of ASCO's Breast Cancer Guideline Advisory Group. She previously served the society as chair of the Nominating Committee, chair of the Professional Development Committee, track leader of the annual meeting Education Committee, and a member of the Journal of Clinical Oncology editorial board.

Carey

## Ray receives Young Investigator Award to support breast cancer research

UNC Lineberger's Emily Ray, MD, MPH, has received a Young Investigator Award from the Conquer Cancer Foundation of the American Society of Clinical Oncology, in conjunction with the Breast Cancer Research Foundation.

Ray, an assistant professor of medicine, will use the one-year, \$50,000 award to support her work to develop predictive models that accurately determine breast cancer prognosis in late-stage breast cancer patients. She and her colleagues will create a breast cancer-specific prognostic tool to assess risk of death so at-risk patients can avoid unnecessary treatments.

Ray

## Dittus and colleagues write the book on rare lymphomas

UNC Lineberger's Christopher Dittus, DO, MPH, assistant professor of medicine, is the editor of a new book that offers a comprehensive review of how to diagnose and manage rare lymphomas, with a focus on novel treatment approaches. Dittus said the purpose of "Novel Therapeutics for Rare Lymphomas" is to increase the understanding of these diseases, with the goal of improving patient care.

UNC Lineberger faculty and trainees contributed chapters to the volume, including Anne Beaven, MD; Edith Bowers, MD; Catherine C. Coombs, MD; Yuri Fedoriw, MD; Natalie Grover, MD; Yara Park, MD; Raghuveer Ranganathan, MD; and Thomas C. Shea, MD. UNC hematology and oncology fellows Timothy Voorhees, MD, and Luis Malpica Castillo, MD, as well as UNC surgical pathology fellow Renee Betancourt, MD, were also authors. Faculty from nine other academic cancer centers also contributed chapters.

## **INFRASTRUCTURE AND SHARED RESOURCES**

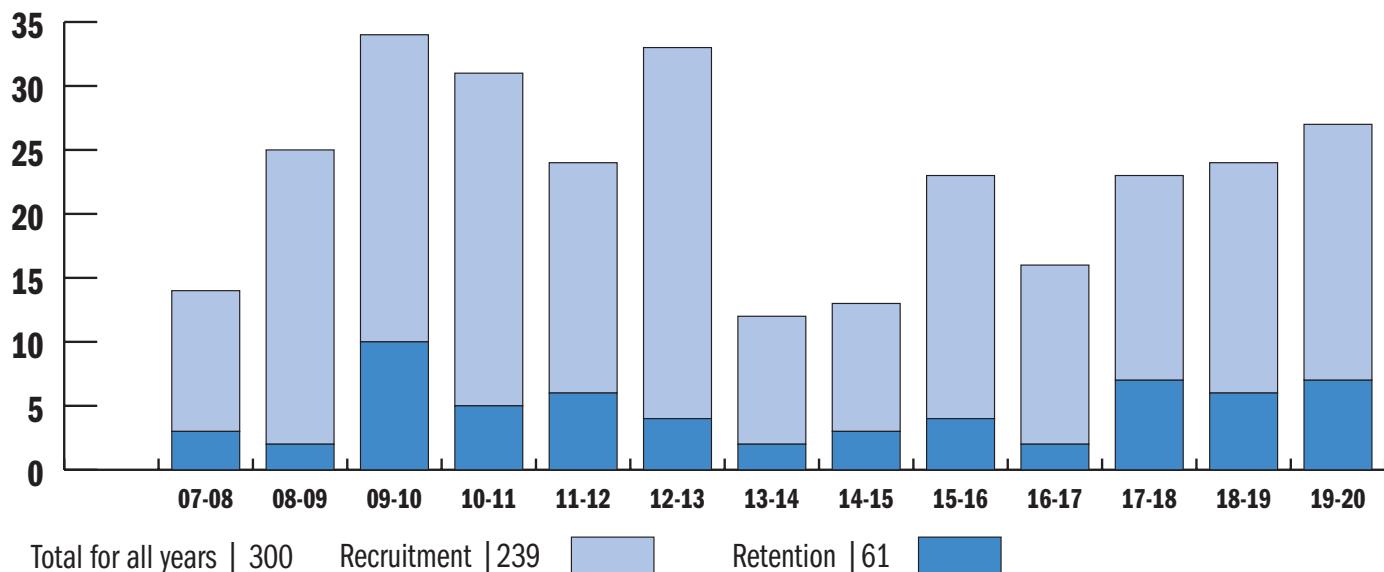

## ***Developing research partnerships***

UNC Lineberger's leadership understands the value of developing research partnerships with investigators at other University of North Carolina System institutions. In 2019, the cancer center funded four research projects at NC State, East Carolina and UNC Greensboro, which are in addition to UNC Lineberger's decade-long collaboration with faculty at North Carolina Central University. These partnerships make it possible to bring together a wider array of insights and resources to bear on the causes of cancer, the development of novel therapies and approaches to prevent the disease.

UNC Gillings School of Global Public Health  
Department of Health Policy and Management  
Cancer care inequities; Palliative and support care; Health informatics

# INFRASTRUCTURE IMPACTS

In addition to supporting the recruitment and retention of world-class researchers and clinicians, the UCRF has funded critical core infrastructure and shared resources such as imaging, informatics and other research tools that are indispensable in the push to advance cancer research and care. The development of virtual tumor boards, telemedicine, community and provider partnerships, and other outreach initiatives have helped UNC Lineberger reach patients and clinical practices in all 100 North Carolina counties.

## **UNC Lineberger Cancer Network educates medical professionals, patients**

A vital part of UNC Lineberger's mission as a teaching hospital is to provide continuing education to health care providers across the state. Physicians and other health professionals can earn continuing education credits by attending events sponsored by an accredited provider, and can use the credit toward re-licensure, re-certification, and renewal of hospital privileges.

The UNC Lineberger Cancer Network is a main source of continuing education for oncology professionals. The program's bi-monthly continuing education series reaches physicians, nurses and allied health professionals across North Carolina through live, interactive medical and nursing lectures delivered by UNC faculty. The lecture series enables practitioners to access timely, evidence-based oncology therapeutic updates from the convenience of their own practice, while earning continuing education credits. For lecture participation via the telehealth infrastructure this year, medical professionals earned:

- 49 American Medical Association Continuing Medical Education credits;
- 935 American Nurses Credentialing Center credits;
- 199 American Society of Radiologic Technologist credits; and
- 294 Accreditation Council for Pharmacy Education credits.

A total of 3,045 telehealth attendance hours were logged by medical professionals this year.

 The UCRF has significantly improved UNC Lineberger's ability to connect with oncologists and cancer patients across North Carolina. Using infrastructure supported by UCRF funds, UNC faculty regularly hold virtual "tumor boards" – in-depth reviews of a particular patient's case with a team of doctors – with doctors in hospitals across the state, and consult in specialties that are not available in rural communities. This year 355 virtual tumor boards, across 17 different disciplines, helped connect community-based medical professionals with UNC oncology experts. Additionally, tumor boards are another source for continuing education and this year provided nearly 4,300 credit hours in the following specialty areas:

Bone Marrow Transplant/ Cellular Therapy	766
Gastro-Intestinal	566
Hematology Oncology	455
Breast Radiology Pathology	215
Melanoma	131
Breast	1,010
Pediatrics	505
Benign Hematology	69
Head and Neck	557
<b>Total</b>	<b>4,274</b>

UNC Lineberger uses the telehealth network to connect in real time with health care providers to discuss best practices for patient care and cutting-edge research, and to hold community education events aiming to raise patient awareness of issues related to cancer. This year, UNC Lineberger hosted 24 telehealth lectures with almost 3,045 participants, including nurses, doctors, physician assistants, nurse practitioners, pharmacists, social workers, nutritionists and clinic managers in 17 oncology practices across the state.

The UNC Lineberger Cancer Network North Carolina Community College Lecture Series also offered four courses designed for students enrolled in nursing and allied health sciences programs at 19 community college sites across North Carolina. These lectures provide opportunities for students to become more familiar with strategies necessary for caring for cancer patients. It is hoped that this series will lead to improvements in cancer care, and a greater interest in oncology-related professions. Workforce development at all levels will be crucial as North Carolina continues to increase in population and in the number of cancer survivors. The North Carolina Community College System could be a key contributor; therefore UNC Lineberger will enlarge this program in content and scope over the next two years.

Blue Ridge Community College, Flat Rock

Cape Fear Community College, Wilmington

Central Carolina Community College, Sanford

Central Piedmont Community College, Charlotte

Craven Community College, New Bern

Edgecombe Community College, Tarboro

Fayetteville Technical Community College, Fayetteville

Forsyth Technical Community College, Winston-Salem

Isothermal Community College, Spindale

Johnston Community College, Smithfield

Montgomery Community College, Troy

Robeson Community College, Lumberton

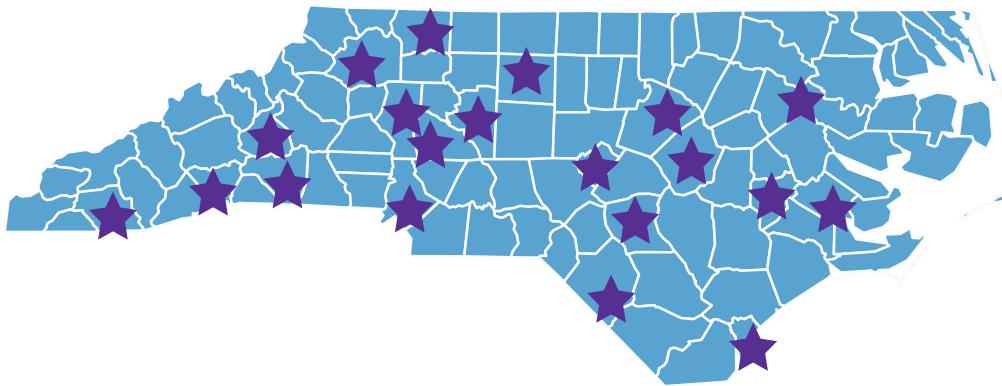

Rowan-Cabarrus Community College, Salisbury

South Piedmont Community College, Polkton

Stanly Community College, Albemarle

Surry Community College, Dobson

Wilkes Community College, Wilkesboro

At the university level, to give undergraduate students an introduction into cancer biology and disparities and hopefully spark an interest in cancer care or research as a career field, the Biology of Cancer seminar series was launched this year in partnership with North Carolina Central University (NCCU) and North Carolina A&T (NC A&T) State University.

To support care providers and caregivers, the UNC Lineberger Cancer Network assisted with 39 Palliative Care Grand Rounds lectures, which cover topics that impact the practice of palliative medicine. UNCLCN assisted in hosting seven Caregiver Conversations sessions with the Office of Community Outreach and Engagement as well as 10 Schwartz Rounds, which focus on issues related to the emotional impacts of patient care.

UNCLCN also worked with 15 fellowship programs in 11 states to host and record six Fellows ACHIEVE lectures focused on treating patients with COVID-19 and cancer.

## North Carolina Cancer Hospital celebrates 10th anniversary

In late 2009, North Carolina's cancer hospital opened its doors, replacing an outdated and overcrowded treatment facility and welcoming patients into a state-of-the-art cancer center designed to substantially improve patient care and to serve as the clinical home for UNC Lineberger research.

"The biggest benefit of the new hospital was giving the people of North Carolina a cancer hospital that valued them, their time, and their experience," said **Lisa Carey, MD, FASCO**, the Richardson and Marilyn Jacobs Preyer Distinguished Professor in Breast Cancer Research and deputy director of clinical sciences at UNC Lineberger.

Funded with \$180 million from the state, the N.C. Cancer Hospital and adjacent office building was built to help UNC's researchers and clinicians better meet the needs of a growing population of cancer patients. With more than 320,000 square feet of space, the new hospital offered multidisciplinary clinic space, facilities for tumor assessment imaging and treatment, amenities for patient support, a healing environment, and other features – all of which are needed to support a world-class comprehensive cancer program.

"The ability to provide all of these activities under one roof is what made the construction of the N.C. Cancer Hospital a transformative event for the hospital and for our patients," said **Jonathan Serody, MD**, the Elizabeth Thomas Professor of Medicine, Microbiology and Immunology and director of the Division of Hematology. "It's a huge help to have radiology, clinics, the infusion facility and the inpatient beds in one area."

***"The biggest benefit of the new hospital was giving the people of North Carolina a cancer hospital that valued them, their time, and their experience."***

- Lisa Carey, MD, FASCO

The hospital and its associated clinics oversee more than 208,000 outpatient visits annually, from all 100 counties in North Carolina. **Mary Beck**, the former senior vice president of planning and program development for UNC Health Care who helped shepherd the construction process,

saw the transformation from both an administrative and a patient's lens.

"When we were planning and designing the cancer hospital, we wanted it to have lots of light – as much natural light as we could," said Beck, a cancer survivor who was treated in UNC's previous cancer clinic, which was housed in a 1950s-era tuberculosis center. "We wanted to use materials that were resilient, that felt good and were positive. We wanted to have artwork that supported the feeling of healing and the positive nature that we wanted people to feel when they came in the building."

## **BUDGET AND EXPENDITURE INFORMATION**

# BUDGET AND EXPENDITURES

The UCRF was initially funded by three sources of support: tobacco settlement funds, taxes on other (non-cigarette) tobacco products (OTP) such as snuff, and state appropriations. In the 2013-2014 budget, the General Assembly consolidated all tobacco settlement funds into the State's General Fund. That consolidation eliminated tobacco settlement funds as a source of UCRF support, resulting in a roughly 16% reduction in UCRF revenues. The OTP tax proceeds have varied from year to year, but the state's population growth has led to increases the past five years.

<b>FY 2020 Anticipated and Actual Fund Revenue</b>		<b>Amount*</b>
Anticipated		
State Appropriation		\$16,020,000
Projected OTP Tax Receipts		\$32,480,000

## RESTRICTIONS ON THE USE OF UCRF MONIES

G.S. 116-29.1 established the UCRF as a special revenue fund and created the Cancer Research Fund Committee to provide accountability and oversight. As the Cancer Research Fund Committee, led by its Chairman, then-UNC President Erskine Bowles, developed the UCRF Strategic Plan in 2009, each potential use of UCRF resources was evaluated according to the following questions:

- Will it address North Carolina's needs in terms of the goal of reducing the cancer burden in the state?
- Can we be world class at it? (Does it build on existing strengths, and is there an opportunity to lead?)
- Is there a strong economic model/justification for UCRF investment?

Based on these questions, the Committee developed a clear set of rules to guide how UCRF funds would be best spent. The Committee determined that UCRF funds should focus major resources on a limited set of opportunities to have the greatest impact; fund initiatives where UNC has the opportunity to establish a leadership position; be self-sustaining and provide leverage for additional extramural funding; build fundamental cancer-related research capabilities that benefit UNC research programs; and enhance North Carolina's economy by creating jobs, intellectual property, and startup companies.

To maximize the effectiveness of the state's investment and to ensure wise and responsible use of the funding, the Strategic Plan imposed additional restrictions on the use of these funds, instructing that UCRF funds should not:

- Invest broadly in an effort to make incremental improvements everywhere;
- Provide funding that would limit future flexibility;
- Undermine faculty innovation and competitiveness by eliminating the need for extramural grant funding;
- Substitute for existing university or health system funding or new philanthropy;
- Make expenditures based upon institutional or other needs outside cancer research; or
- Negatively impact other research on campus, for example by appropriating shared research infrastructure or resources.

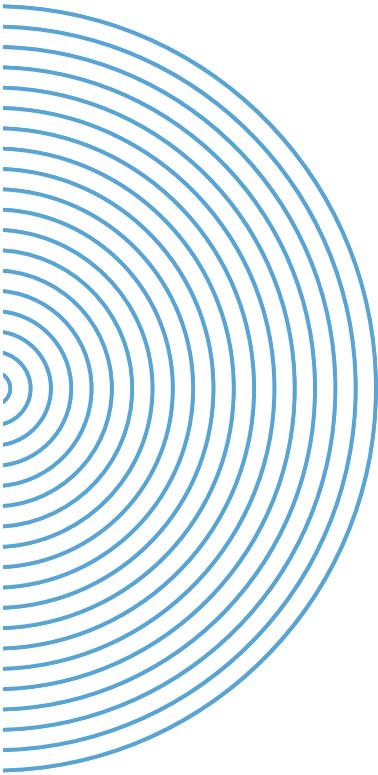

## EXPENDITURES OF STATE FUNDS RELATED TO UCRF

The table below provides an accounting of expenditures of state funding related to the UCRF. Further details regarding these expenditures are included as appendices to this report.

More than half the funding from UCRF has been used to recruit world-class researchers to North Carolina. Less than 2% of the total UCRF budget is used for administrative expenses.

Strategic Plan Categories	YTD Actual*
Tier 1: Research Priorities	
Optimizing NC Cancer Outcomes	\$7,682,742

## MAKING A PROFOUND POSITIVE EFFECT

From supporting dozens of renowned faculty members to funding critical technology and data sources to assist in research, from enabling community partnerships and a statewide reach that benefits patients in all 100 counties to producing ongoing and growing economic impacts, the University Cancer Research Fund continues to have a profound positive effect in North Carolina. Thank you again for continuing to support this landmark investment, and the many health and economic benefits it brings to our state.

## APPENDIX

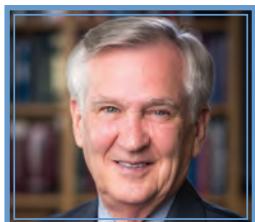

# CANCER RESEARCH FUND COMMITTEE

## CANCER RESEARCH FUND COMMITTEE

The legislatively established Cancer Research Fund Committee, chaired by Kevin M. Guskiewicz, PhD, Chancellor of the University of North Carolina at Chapel Hill, oversees the University Cancer Research Fund. The seven-member committee includes five ex-officio members designated by the legislation who elect two at-large members. The at-large members are to be leaders at nationally prominent cancer programs. Currently, the two are Drs. Edward Benz (President and CEO Emeritus, Dana-Farber Cancer Institute) and Gary Gilliland (President and Director, Fred Hutchinson Cancer Research Center).

## EXECUTIVE SUMMARY

In 2007, the state leaders of North Carolina developed a fund to invest in cancer research in the state through the University of North Carolina Lineberger Comprehensive Cancer Center. Cancer is one of the leading causes of death in North Carolina, and the fund was developed to demonstrate a commitment to the health of the state's residents. Although cancer mortality rates have been decreasing, incident rates of cancer have increased over the past decade.<sup>1</sup> Additionally, lung cancer continues to be the leading cancer-causing death in North Carolina.<sup>2</sup> The state is investing in this fund, ensuring that future generations of North Carolinians will develop cancer less often and live longer and better when they do.

The initial investment in 2007 to the University Cancer Research Fund (UCRF) of \$25 million has grown to greater than \$52.6 million for FY 2020. This year alone the FY 2020 \$52.6 million investment produced an economic impact of more than \$656.4 million, Tripp Umbach analysis shows. This investment has translated into innovative research to detect, treat, and prevent cancer and has given an opportunity for UNC to become home to one of the nation's leading public comprehensive cancer centers. University of North Carolina Lineberger Comprehensive Cancer Center (UNC LCCC) is one of only 51 National Cancer Institute-designated comprehensive cancer centers. The center brings together some of the most exceptional physicians and scientists in the country to investigate and improve the prevention, early detection, and treatment of cancer. With research that spans the spectrum from the laboratory to the bedside to the community, the faculty work to understand the causes of cancer at the genetic and environmental levels, to conduct groundbreaking laboratory research, and to translate findings into pioneering and innovative clinical trials. Investment in the UCRF allows the state an even greater ability to continue its tradition of care for all North Carolinians. It is an investment in making the best care in the world available in North Carolina, and it is difficult to think of a better investment than one for the future health of the state's residents.

People and place are the keys to the UCRF's success. UCRF is about investing in people – promising researchers with the best ideas for cancer research and master clinicians who know how to bring those findings to patients and others. UNC Chapel Hill and UNC Lineberger have a culture of collaboration – both across the university and with partners beyond the university's walls – that is essential to promote discovery and then turn those discoveries into new ways to treat, find, and prevent cancer. Outside of the obvious impacts that UNC Lineberger provides to North Carolina, the UCRF offers additional impacts through the dollars that directly and indirectly impact the state economy and job numbers.

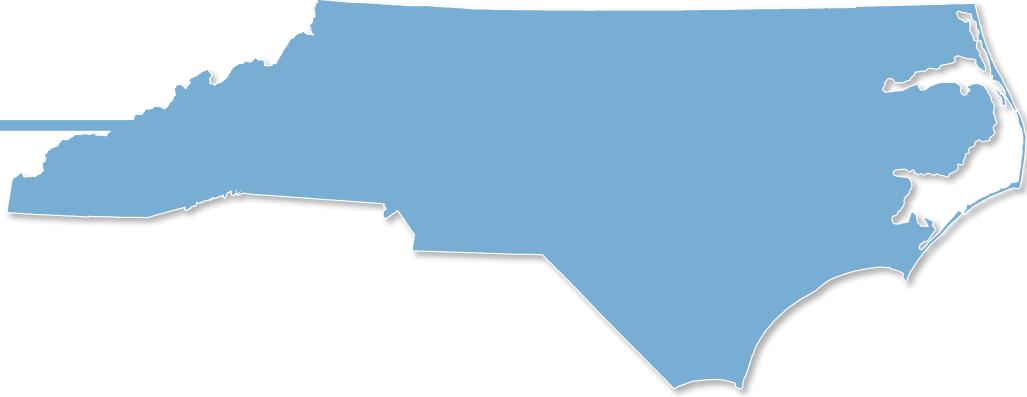

The aim of this report is to illustrate in detail the positive economic impact that UCRF dollars have on North Carolina's biomedical sector in the current year as well as the history of impacts the fund has shown over the last decade; it is important to note that these impacts have been annual since the fund's inception. Through expanding the state economy, creating jobs, generating tax revenue, encouraging scientific collaboration, and leveraging federal research funds, these dollars have provided a significant benefit to the state of North Carolina.

1. Cancer in North Carolina 2013 Report. North Carolina State Center for Health Statistics.

2. Cancer Profiles North Carolina April 2017 <http://www.schs.state.nc.us/schs/CCR/cp2017/NorthCarolina.pdf>

## KEY FINDINGS

### EXPANDING THE STATE'S ECONOMY.

Expanding the state's economy. UCRF generated more than **\$656.4 million** in total economic impact in North Carolina in 2020. This includes direct spending of more than \$335.9 million within the state, much of which is a result of the generation of funds from national grants due to research activities that are just a portion of the **\$216.0 million** in research funding received in 2020 alone. The ripple effect of in-state spending accounts for nearly **\$320.5 million** in additional funds, representing downstream spending by employees, vendors, and contractors. This is just the impact of the current year (2020). Tripp Umbach estimates that through the commercialization of the discoveries made from this research, the impact by 2030 will be dramatically larger.

### CREATING JOBS

UCRF directly supported employment in 2020 of more than **1,094 jobs** in North Carolina and an additional **1,975 jobs** through both the indirect and induced impacts of those direct jobs and the spending generated from the UCRF within North Carolina. This means the total impact of this fund is more than **3,069 jobs**.

### GENERATING TAX REVENUE

Tripp Umbach estimates that UCRF provided greater than **\$20.8 million** in local and state tax revenue in 2020.

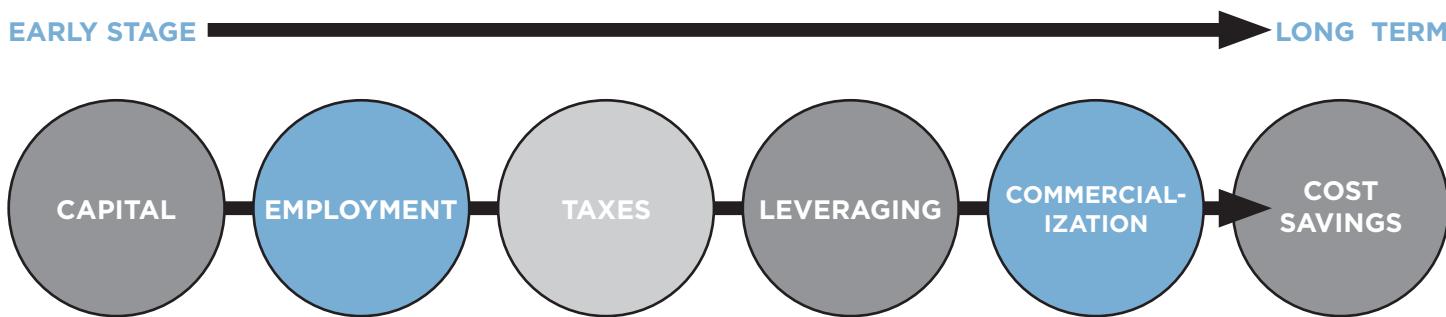

### ENCOURAGING SCIENTIFIC COLLABORATION AND LEVERAGING FEDERAL RESEARCH FUNDS

These funds have encouraged recipient institutions to collaborate as well as to apply for and win highly competitive federal grants. Recipients of these state research funds have leveraged federal research funds amounting to more than **\$173.8 million** in federal research grants, bringing the total to more than **\$216.0 million** in external funding in 2020 alone. This would not have been possible without the UCRF funding, which elevated UNC Lineberger to the top rankings.

## IMPACTS OF UCRF IN 2020

Any discussion of the economic impact of these state funds must be predicated on an understanding that research investments, by their nature, have a multitude of impacts on a state's economy, both in the present and in the future. Short-term impacts include capital and non-capital investment and employment growth supported by the funds and new federal medical research funding leveraged by North Carolina's funds that expand the state's economy. Longer-term impacts include a strengthened ability to compete nationally for funding and to attract world-class scientists; the economic and employment advances that will be achieved when medical research and innovation are translated into commercial products and services; and healthcare cost savings to the state as a result of innovation (see Figure 1):

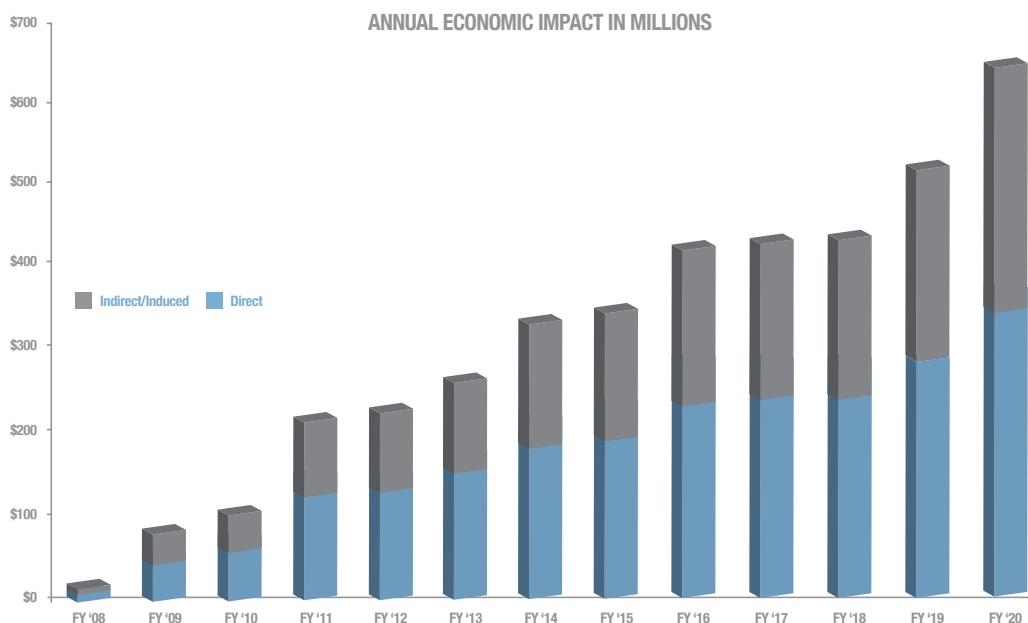

**Figure 1. Research Return on Investment Timeline**

### Early-Stage Economic Impact of Funding

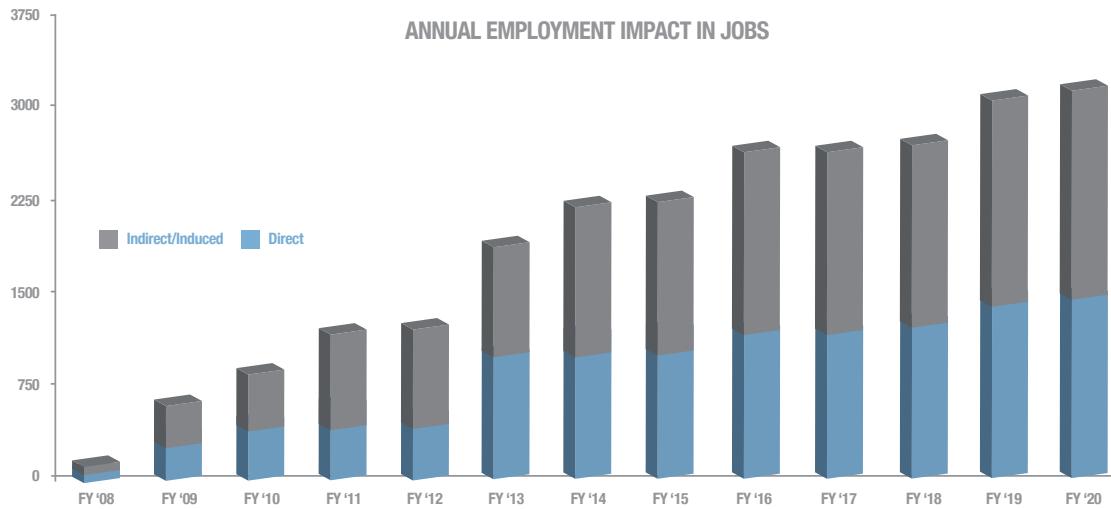

UCRF dollars invested in research in 2020 have resulted in an expansion of the state's economy by greater than \$656.4 million. Tripp Umbach's economic impact analysis indicates that even in the early stage (2007-2011), program investments in capital and human resources have returned greater than three dollars to the state's economy for every one dollar invested. In 2020, this amount has risen to more than 12 dollars for every dollar invested. Spending attributable to the fund can be divided into two parts: direct and indirect/induced impacts.

The direct impacts of program funding include institutional expenditures for capital improvements and goods and services but also spending by researchers, research staff, subcontractors, and visitors who come to these institutions for conferences and meetings. The indirect impacts of tobacco funds result from these direct, first-round expenditures, which are received as income by businesses and individuals in the state and recirculate through the economy in successive rounds of re-spending. The end result is a multiplied economic impact that is a linear result of the state's investment in research. The impacts over the last decade are outlined below in the chart below.

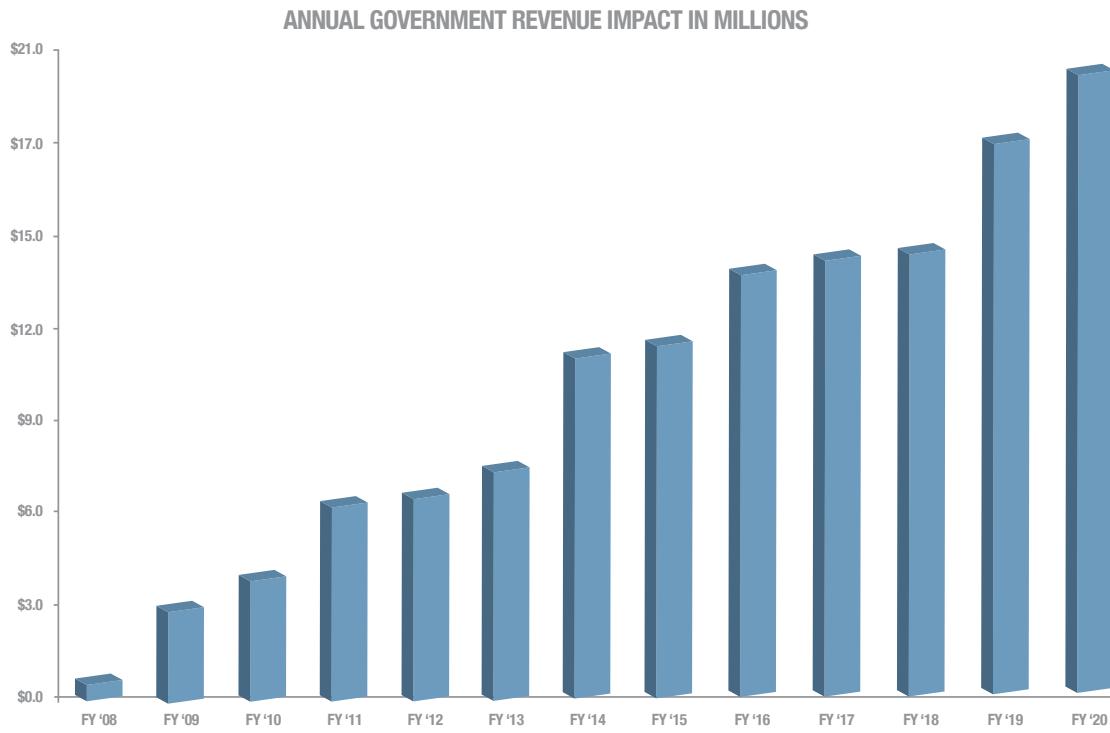

## Early-Stage Impact of UCRF Dollars on Employment

Tripp Umbach estimates that in 2020, UCRF dollars for healthcare research have created and sustained 3,069 high-paying research-related jobs throughout the state of North Carolina. This includes both the 1,094 high-paying research-related jobs directly attributed to UNC in addition to the 1,975 indirect and induced jobs supported throughout the state of North Carolina. The economic expansion created by the funds allocated to the UCRF have, in turn, brought about demand for additional employment in the state's economy. The employment impact has continued to grow and provide high-paying jobs to the state of North Carolina.

## Early- and Later-Stage State Tax Impacts

Tripp Umbach estimates that funds provided in 2020 have resulted in nearly \$20.8 million in tax revenues to the state of North Carolina. In-state spending by the recipient organizations and spending in the state by out-of-state parties have a significant impact on state tax revenue. Taxes created as a result of spending in the state's economy, and generation of fresh dollars from outside of the state, are expected to grow as early-stage research is commercialized. The tax impacts have increased over the last decade as well as provided a return to the state for the investment.

## Impacts Associated with Leveraged Federal Medical Research Funds

The North Carolina academic medical industry and growing life sciences industry have been measurably enhanced by these state funds. This federal medical research funding helps fuel clinical enterprises. According to the Association of American Medical Colleges, North Carolina's academic medical industry ranks 11th for total annual economic impact.<sup>3</sup>

These funds from the state's UCRF have encouraged researchers at the recipient organization to collaborate to apply for and win highly competitive federal grants. These funds have enabled recipients of UCRF dollars to leverage federal research funds amounting to approximately \$173.8 million, bringing the total to nearly \$216.0 million in external funding in 2020 alone.

3. In 2019, North Carolina ranked 11th in Academic Medical Impact of AAMC members and COTH hospitals.

## HEALTHCARE COST SAVINGS

While this study does not include detailed economic impact models that calculate the potential cost savings attributable to research activities, a growing body of literature provides potential insights. Breakthrough research by Silverstein et al (1995) documented \$69 billion in annual economic savings resulted from NIH-supported research. The return on investment calculated by Silverstein was seven dollars in healthcare cost savings for every dollar invested in NIH-sponsored research.<sup>4</sup>

## COMMERCIALIZATION

Additional impacts that will be realized because of the UCRF are the levels of commercialization that occur when clusters of research professionals collaborate on a specialty area of research. Tripp Umbach estimates that after 10 years of funding and operations, the commercialization of the UCRF will produce discoveries and spinoff businesses generating additional economic activity in the state of North Carolina. Looking at projected commercialization impact in 2030, Tripp Umbach estimates this to be from \$642.6 million at a conservative level of growth scenario to \$1.2 billion using the aggressive level of growth in additional economic activity within North Carolina. These activities will also create an additional 3,501 (conservative) to 6,236 jobs (aggressive) high-paying jobs. These additional economic and employment impacts will translate into additional state and local government revenue of \$23.7 million to \$42.6 million.

It is important to note that these commercialization impacts are in addition to the annual operational impacts of the UCRF and that these impacts will continue to grow as the research fund continues to be successful. These impacts are realized after years of research once the breakthroughs or discoveries have been made and the discoveries begin to hit the marketplace. Examples of successful spinoff businesses supported by UNC Lineberger include Meryx, G1 Therapeutics, GeneCentric, EpiCypher, Epizyme, Liquidia, and many others. Since 2009, UNC Lineberger startup companies have raised more than \$300 million in non-dilutive financing from the NIH, angel investors, and venture capitalists.

Tripp Umbach's projections are based on 2020 funding and the national experience of peer academic medical centers that have implemented similar academic, clinical, research, and economic development plans during the past 20 years. Since 1995, Tripp Umbach has measured the economic impact of every U.S. academic medical center on behalf of the Association of American Medical Colleges and used historical trending data from this experience in making projections.

---

4. Cost Savings Resulting from NIH Research Support, NIH Publication No. 93. Silverstein, H.H. Garrison and S.J. Heinig, 1995.

## APPENDIX A: DEFINITION OF TERMS

### Study Year

Fiscal Year 2020

### Total Impact

The total impact of an organization is a compilation of the direct impact, the indirect impact, and the induced impact generated in the economy as a result of the organization.

### Direct Impact

Direct impact includes all direct effects the organization has on the regional area due to the organizational operations. These items include direct employees, organizational spending, employee spending, as well as spending by patients and visitors to the organization.

### Indirect Impact

The indirect impact includes the impact of local industries buying goods and services from other local industries. The cycle of spending works its way backward through the supply chain until all money leaks from the local economy, either through imports or by payments to value added. The impacts are calculated by applying direct effects to the Type I Multipliers.

### Induced Impact

The response by an economy to an initial change (direct effect) that occurs through re-spending of income received by a component of value added. IMPLAN's default multiplier recognizes that labor income (employee compensation and proprietor income components of value added) is not leakage to the regional economy. This money is recirculated through the household spending patterns, causing further local economic activity.

### Multiplier Effect

The multiplier effect is the additional economic impact created as a result of the organization's direct economic impact. Local companies that provide goods and services to an organization increase their purchasing by creating a multiplier.

## APPENDIX B: METHODOLOGY

To fully quantify the impact of the funding of UCRF to the operations of UNC Lineberger Comprehensive Cancer Center within the various geographical areas throughout this study, Tripp Umbach established a study methodology. It was critically important that the methodology used would deliver a comprehensive, yet conservative, estimate of the operations' impact, based on information compiled using uniform and consistent techniques. In addition, the study team sought to develop a reproducible methodology, ensuring that subsequent studies could build upon the information and knowledge gained through this effort.

Tripp Umbach determined that the use of the IMPLAN Pro economic impact model software was most appropriate for this analysis. The IMPLAN econometric model operates by estimating the direct impacts, indirect impacts, and induced impacts of specific economic activity. Direct economic impacts are those attributable to the initial economic activity. For example, an operation with 10 full-time employees creates 10 direct jobs. Indirect economic impacts are those economic activities undertaken by vendors and suppliers within the supply chain of the direct activity because of the initial economic activity. For example, suppliers of goods, materials, and services used in the direct activities produce indirect economic impacts. Induced economic impacts result from the spending of wages paid to employees in local industries involved in direct and indirect activities. Tripp Umbach selected the IMPLAN model because of its frequent use in economic impact, in addition to its development independent of local influences.

Tripp Umbach collected employment information concerning the economic activity of UCRF's funding on operations themselves and followed up in person to make certain the data was the most current available.

In this report, the impact was measured using IMPLAN datasets. The IMPLAN data files include information for 546 different industries (generally three- or four-digit SIC code breakdown) and more than 21 different economic variables. IMPLAN sources its employment data from ES202 employment security data supplemented by county business patterns and REIS data. Employment data used in the analysis includes full-time and part-time positions.

It should be noted that, at the time of performing the UCRF assessment, the most recent IMPLAN data files for the state of North Carolina were for 2018. While the data is not for the current year, it is unlikely that the fundamental economic structure of North Carolina's economic fabric has changed to an extent that would invalidate the analysis. IMPLAN data and accounts closely follow the accounting conventions used in the "Input/Output Study of the U.S. Economy" by the U.S. Bureau of Economic Analysis and the rectangular format recommended by the United Nations.

By deriving the direct and actual employment numbers from IMPLAN for each county, Tripp Umbach was able to conduct input/output modeling to analyze the current impact of the industry in each county. Tripp Umbach supplied additional information as required to supplement the data supplied by UNC Lineberger Comprehensive Cancer Center.

## APPENDIX C: TRIPP UMBACH QUALIFICATIONS

Tripp Umbach is the national leader in providing economic impact analysis to leading healthcare organizations and academic health centers. The firm has completed more than 250 economic impact studies over the years for clients such as the Mayo Clinic Rochester, The Cleveland Clinic, University of Florida Shands HealthCare, and the Ohio State University Wexner Medical Center. In addition to work on multiple occasions for the six allopathic medical schools and academic medical centers in Pennsylvania, Tripp Umbach has completed statewide studies for multiple institutions in Ohio, Virginia, South Carolina, Wisconsin, and Minnesota.

Tripp Umbach recently completed its fifth national study of all U.S. medical schools and teaching hospital affiliates for the Association of American Medical Colleges.

In addition to completing similar studies for UNC LCCC over the last 12 years, Tripp Umbach has also completed economic impact studies for cancer centers such as the CURE Funding for PA Cancer Alliance, The Wistar Institute, University of North Carolina's Cancer Hospital, Ohio State University's James Cancer Hospital and Solove Research Institute, Ohio State University's Comprehensive Cancer Center, Milton S. Hershey Medical Center's Cancer Institute, Mayo Clinic/Allegheny General Hospital Cancer Services planning, UPMC Hillman Cancer Center feasibility and economic impact projections study, University of Pennsylvania projected economic impact of the Cancer Center as a component of the Civic Center project, and University of Florida Shands HealthCare economic impact projections.

## EXPENDITURES SUMMARY

## ESTABLISHING LEGISLATION

§ 116-29.1. University Cancer Research Fund (as modified by SL 2013-360)

(a) Fund. – The University Cancer Research Fund is established as a special revenue fund in the Office of the President of The University of North Carolina. Allocations from the fund shall be made in the discretion of the Cancer Research Fund Committee and shall be used only for the purpose of cancer research under UNC Hospitals, the Lineberger Comprehensive Cancer Center, or both.

(b) Effective July 1 of each calendar year, the funds remitted to the University Cancer Research Fund by the Secretary of Revenue from the tax on tobacco products other than cigarettes pursuant to G.S. 105-113.40A is appropriated for this purpose are appropriated for this purpose.

(c) Cancer Research Fund Committee. – The Cancer Research Fund Committee shall consist of five ex officio members and two appointed members. The five ex officio members shall consist of the following: (i) one member shall be the Chancellor of the University of North Carolina at Chapel Hill, (ii) one member shall be the Director of the Lineberger Comprehensive Cancer Center, (iii) one member shall be the Dean of the School of Medicine at The University of North Carolina, (iv) one member shall be the Dean of the School of Pharmacy at The University of North Carolina, and (v) one member shall be the Dean of the School of Public Health at The University of North Carolina. The remaining two members shall be appointed by a majority vote of the standing members of the Committee and shall be selected from persons holding a leadership position in a nationally prominent cancer program. If any of the specified positions cease to exist, then the successor position shall be deemed to be substituted in the place of the former one, and the person holding the successor position shall become an ex officio member of the Committee.

(d) Chair. – The chair shall be the Chancellor of the University of North Carolina at Chapel Hill. (e) Quorum. – A majority of the members shall constitute a quorum for the transaction of business.

(f) Meetings. – The Committee shall meet at least once in each quarter and may hold special meetings at any time and place at the call of the chair or upon the written request of at least a majority of its members. (2007-323, s. 6.23(b); 2009-451, s. 27A.5(e); 2010-31, s. 9.12.)

(g) Report. – By November 1 of each year, the Cancer Research Fund Committee shall provide to the Joint Legislative Education Oversight Committee and to the Office of State Budget and Management an annual financial report which shall include the following components:

(1) Accounting of expenditures of State funds related to strategic initiatives, development of infrastructure, and ongoing administrative functions.

(2) Accounting of expenditures of extramural funds related to strategic initiatives, development of infrastructure, and ongoing administrative functions.

(3) Measures of impact to the State's economy in the creation of jobs, intellectual property, and start-up companies. (4) Other performance measures directly related to the investment of State funds.

(5) Accounting of any fund balances retained by the Fund, along with information about any restrictions on the use of these funds.

# EXPENDITURES SUMMARY

## EXTRAMURAL AWARDS

UCRF Category	PI Last Name	PI First Name	Sponsor	Award Number	Begin	End	Title	Total Cost
Recruitment	Akulian	Jason	Becton Dickinson (BD) and Company		12/4/18	12/3/20	Respiratory Sample Collection and Procurement for BD Research and Development	\$51,758.72
Recruitment	Alexander	Thomas	AbbVie, Inc.	M16-106-83476/P0#420	11/7/17	9/30/20	A Phase 1 Dose Escalation, Open-Label Study of Venetoclax in Combination with Navitoclax and Chemotherapy in Subjects with Relapsed Acute Lymphoblastic Leukemia	\$46,563.84
Recruitment	Alexander	Thomas	St. Jude Children's Research Hospital, Inc.		3/22/18	10/31/21	VENAML: A Phase I and Expansion Cohort Study of Venetoclax in Combination with Chemotherapy in Pediatric Patients with Refractory or Relapsed Acute Myeloid Leukemia	\$23,342.59
Recruitment	Alexander	Thomas	St Baldricks Foundation	63831.1	7/1/19	12/31/20	Exploring the Biology of Residual Disease in Acute Lymphoblastic Leukemia	\$94,800.00
Recruitment	Amelio	Antonio	NIH National Institute of Dental and Craniofacial Research	5-F31-DE028749-02	7/1/19	6/30/23	FELLOW: R. MURPHY Investigating the role of NRF2 in promoting radioresistance in oral squamous cell carcinoma.	\$46,320.00
Recruitment	Amelio	Antonio	Scripps Research Institute	SUBK00011786	8/1/19	7/31/20	Development and Validation of a Genetically Engineered Model of Neurofibromatosis Type 2 to Facilitate Discovery of Neurotherapeutics	\$24,118.00
Recruitment	Andermann	Tessa	National Marrow Donor Program	32979	8/1/19	12/31/23	Modulation of CAR-T Cell Therapy Efficacy by the Intestinal Microbiome in Patients with Leukemia and Lymphoma	\$80,000.00
Recruitment	Armistead	Paul	NIH National Cancer Institute	5-R01-CA201225-01-05	2/1/16	1/31/21	Leukemia Specific Splice Isoforms as Neo-Antigens for T-Cell Immunotherapy	\$450,736.00
Recruitment	Armistead	Paul	BioFluidica, Inc.		3/1/17	2/29/20	SBIR: Rapid Detection of Minimal Residual Disease in Acute Myeloid Leukemia from Peripheral Blood	\$213,308.00
Innovation Award	Armistead	Paul	Cell Microsystems, Inc.		7/3/17	6/30/20	STTR: CellRift Array for Screening and Isolation of Highly Effective Cytotoxic T Cells	\$55,870.00
Recruitment	Armistead	Paul	American Society of Hematology		7/1/19	6/30/20	FELLOW: LCASTILLO Antigenic and Immunogenic Evaluation of Afro-Caribbean Adult T-Cell Leukemia/Lymphoma for the Optimization of Interferon-Based Therapy	\$70,000.00
Recruitment	Arthur	Janelle	NIH National Institute of Diabetes, Digestive, and Kidney Diseases	1-R01-DK124617-01	6/1/20	5/31/25	Microbiota-mediated fibrotic remodeling in the inflamed intestine	\$404,903.00
Recruitment	Aube	Jeff	University of Kansas Center for Research, Inc.	FY2016-020	7/8/15	5/31/21	Molecular Cancer Therapy Targeting HuR-ARE Interaction	\$80,817.00
Recruitment	Aube	Jeff	University of Kansas Center for Research, Inc.	FY2016-006	7/1/15	3/31/20	HTS to identify small molecules to disrupt abnormal huntingtin interactions in hd	\$77,520.00
Recruitment	Aube	Jeff	Scripps Research Institute	5-27127	5/1/16	1/31/21	Novel Probes of the Kappa Opioid Receptor: Chemistry, Pharmacology, and Biology	\$146,516.00
Recruitment	Aube	Jeff	Scripps Research Institute	5-27127	2/1/20	1/31/21	Novel Probes of the Kappa Opioid Receptor: Chemistry, Pharmacology, and Biology	\$142,121.00
Recruitment	Aubé	Jeff	NIH National Cancer Institute	5-F31-CA239322-02	2/19/19	2/18/21	Chimeric Inhibitors of Androgen Biosynthesis and Signaling	\$36,844.00
Retention	Bae-Jump	Victoria	American Cancer Society	RSG-15-138-01-CCE	1/1/16	12/31/19	Obesity, Cation-Selective Transporters and Metformin in Endometrial Cancer	\$198,000.00
Retention	Bae-Jump	Victoria	V Foundation for Cancer Research	T2017-015	11/1/17	11/1/20	Metabolic and Molecular Biomarkers of Metformin Response in Obesity-driven Endometrial Cancer	\$200,000.00
Retention	Bae-Jump	Victoria	NIH National Cancer Institute	5-R21-CA220269-01-02	9/25/17	8/31/20	Inter-relationship between microbiota diversity, obesity and race in Endometrial Cancer	\$169,106.00
Retention	Bae-Jump	Victoria	NIH National Cancer Institute	5-R37-CA226969-01-03	3/14/18	2/28/23	Obesity-driven Metabolic and Molecular Biomarkers of Metformin Response in Endometrial Cancer	\$355,706.00
Retention	Bae-Jump	Victoria	Oncocutives, Inc.		5/11/18	8/31/21	Single Agent ONC201 in Recurrent or Metastatic Endometrial Cancer	\$42,588.00

UCRF Category	PI Last Name	PI First Name	Sponsor	Award Number	Begin	End	Title	Total Cost
Recruitment	Baker	Rick	Cornell University	87367-11331	1/1/20	3/31/24	MOLECULAR REGULATION OF THE AP2 CLATHRIN ADAPTOR COMPLEX	\$99,180.00
Theme Investment	Baric	Ralph	NIH National Institute of Allergy and Infectious Diseases	5-R01-AI110700-01-05	4/20/15	3/31/21	Mechanisms of MERS-CoV Entry, Cross-species Transmission and Pathogenesis	\$721,207.00
Theme Investment	Baric	Ralph	University of Minnesota	N005402801	6/7/16	5/31/20	Receptor recognition and cell entry of coronaviruses	\$120,384.00
Theme Investment	Baric	Ralph	NIH National Institute of Allergy and Infectious Diseases	5-R01-AI132178-01-04	8/9/17	7/31/22	Broad-spectrum antiviral GS-5734 to treat MERS-CoV and related emerging CoV	\$1,166,670.00
Theme Investment	Baric	Ralph	NIH National Institute of Allergy and Infectious Diseases	HHSN227201700036I	7/14/17	7/13/24	Animal Models II Umbrella	\$1,698,537.00
Theme Investment	Baric	Ralph	NIH National Institute of Allergy and Infectious Diseases	U19AI100625-08S1	4/16/20	8/31/21	Systems Immunogenetics of Influenza Virus Infection in the Collaborative Cross	\$563,507.00
Theme Investment	Baric	Ralph	NIH National Institute of Allergy and Infectious Diseases	U19AI100625-08 7727 Supp	9/1/19	8/31/20	Systems Immunogenetics of Emerging Coronavirus Infections in the Collaborative Cross	\$428,666.00
Theme Investment	Baric	Ralph	NIH National Institute of Allergy and Infectious Diseases	U19AI100625-08S2	6/17/20	8/31/22	Testing the Role of NLRP3 and Other NLR Family Members in COVID19 Pathogenesis	\$103,161.00
Theme Investment	Baric	Ralph	NIH National Institute of Allergy and Infectious Diseases	U19AI100625-08	8/5/12	8/31/22	Systems Immunogenetics of Biodefense and Emerging Pathogens in the Collaborative Cross	\$2,769,729.00
Theme Investment	Baric	Ralph	NIH National Institute of Allergy and Infectious Diseases	U19AI100625-08	3/1/18	2/28/21	Determinants of Coronavirus Fidelity in Replication and Pathogenesis	\$293,121.00
Investment (CC)	Baric	Ralph	NIH National Institute of Allergy and Infectious Diseases	5-U01-AI149644-02	4/19/19	3/31/24	Respiratory Virus Vaccine and Adjuvant Exploration vectors to prevent Severe Coronavirus infections	\$1,000,000.00
Theme Investment	Baric	Ralph	North Carolina Biotechnology Center	2020-GTF-6905	12/1/19	11/30/21	Structure-guided Evolution of Human Airway tropic AAV inhibitor against COVID-19 in a primary human airway epithelial cell assay	\$190,340.00
Theme Investment	Baric	Ralph	Pfizer International, LLC (Corporate Office New York)	20-4207	3/15/20	9/15/20	Assessment of activity of a novel SARS-CoV 3CL protease inhibitor	\$323,614.00
Theme Investment	Baric	Ralph	NIH National Institute of Allergy and Infectious Diseases	1-R01-AI148260-01	3/5/20	2/28/25	Antibody Landscape following Human Norovirus Infection and Vaccination	\$767,330.00
Theme Investment	Baric	Ralph	Eli Lilly and Company	4/15/20	4/14/21	Therapeutic Antibody Evaluations	\$242,511.00	
Recruitment	Baron	John	NIH National Cancer Institute	5-R01-CA226086-01-02	4/9/19	3/31/24	The immune contexture of colorectal adenomas and serrated polyps	\$625,529.00
Recruitment	Basch	Ethan	Mayo Clinic	UNC-194321-04 / 66188158	8/1/14	7/31/19	Alliance NCCORP Research Base	\$70,282.00
Retention	Basch	Ethan	Patient-Centered Outcomes Research Institute	ME-1507-32079	8/1/16	12/31/20	Patient-Reported Outcomes-based Performance Measures (PRO-PMs)	\$224,209.00
Retention	Basch	Ethan	Alliance for Clinical Trials in Oncology	IHS-1511-33392	11/1/16	1/31/22	Electronic Patient Reporting Of Symptoms During Outpatient Cancer Treatment: A U.S. National Randomized Controlled Trial	\$524,718.00
Retention	Basch	Ethan	NIH National Cancer Institute	5-T32-CA116339-13	7/1/05	7/31/23	Cancer Care Quality Training Program	\$256,704.00
Retention	Basch	Ethan	NIH National Cancer Institute	5-U01-CA233046-03	9/30/18	8/31/23	Analyzing and Interpreting PRO-CTCAE with CTCAE and Other Clinical Data to Characterize Drug Tolerability	\$530,334.00
Retention	Basch	Ethan	Mayo Clinic	CCH-259713/P066962983	8/14/19	7/31/25	Alliance NCCORP Research Base	\$39,237.00
Recruitment	Batrakova	Elena	NIH National Institute of Neurological Disorders and Stroke	5-R01-NS102412-01AI-03	3/1/18	11/30/22	Cell-based Platform for Gene Delivery to the Brain	\$338,579.00
Recruitment	Batrakova	Elena	NIH National Institute of Neurological Disorders and Stroke	5-R01-NS112019-01-02	9/1/19	6/30/24	Extracellular Vesicles for CNS Delivery of Therapeutic Enzymes to Treat Lysosomal Storage Disorders	\$295,003.00

UCRF Category	PI Last Name	PI First Name	Sponsor	Award Number	Begin	End	Title	Total Cost
Recruitment	Batrakova	Elena	Michael J Fox Foundation for Parkinson's Research	17846	1/1/00	8/14/21	Bio-inspired Nanoformulation of GDNF for Treatment of Parkinson's Disease (PD)	\$297,001.56
Innovation Award	Bauth	Victoria	NIH National Heart, Lung, and Blood Institute	5-R35-HL139950-03	1/1/18	12/31/24	MOLECULAR AND CELLULAR CONTROL OF ANGIOGENESIS	\$922,295.00
Innovation Award	Bauth	Victoria	Johns Hopkins University	2004080385	8/15/18	7/31/20	New Roles for VEGFR1 in Angiogenesis	\$200,516.00
Innovation Award	Bear	James	NIH National Institute of General Medical Sciences	3-R01-GM111557-04S1	9/1/14	8/31/19	The role of the Arp2/3 complex in cellular actin dynamics	\$73,100.00
Retention	Bear	James	National Science Foundation	CBET-1706019	7/1/17	6/30/20	Collaborative Research: Mechanisms of Gradient Sensing by 'Feel' in Cell Migration Directed by Extracellular Matrix	\$283,371.00
Retention	Bear	James	North Carolina State University	2014-0702-02	7/1/18	5/31/22	Multiscale modeling of wound healing	\$350,398.00
Retention	Bear	James	NIH National Institute of General Medical Sciences	5-R35-GM130312-01-02	2/1/19	1/31/24	Systematic analysis of the actin cytoskeleton and directed cell migration	\$581,059.00
Retention	Bear	James	NIH National Institute of General Medical Sciences	5-F32-GM131578-02	4/1/19	8/12/20	FELLOW: M. BUTLER Spatiotemporal regulation of branched actin in cells	\$25,527.00
Retention	Bear	James	NIH National Institute of General Medical Sciences	1-F31-GM133094-02	8/1/19	7/31/22	FELLOW: Z. KING Dissecting the mechanistic contributions of Coronin 1B and Coronin 1C to directed cell migration.	\$45,520.00
Recruitment	Bennett	Antonia	Alliance for Clinical Trials in Oncology Foundation	PCS-1505-30497	7/1/16	6/30/23	Comparison of Operative to Medical Endocrine Therapy (COMET) for Low-Risk DCIS	\$67,246.00
Recruitment	Bennett	Antonia	Duke University	A030254	9/30/17	6/29/20	Admin Core - Enhancing Clinical Meaningfulness And Usefulness Of PROMIS Pediatric Measures Via Validation In Children And Adolescents With Rheumatic Disease, Cancer, Or Inflammatory Bowel Disease	\$24,164.00
Recruitment	Bennett	Antonia	Duke University	A030250	9/30/17	6/29/20	BIOS Core - Enhancing Clinical Meaningfulness And Usefulness Of PROMIS Pediatric Measures Via Validation In Children And Adolescents With Rheumatic Disease, Cancer, Or Inflammatory Bowel Disease	\$18,704.00
Recruitment	Bennett	Antonia	Boston University Board of Trustees	45000003048	7/1/18	12/31/21	Access to and Value of Treatment Innovation Study	\$189,138.00
Recruitment	Bennett	Antonia	Duke University	2037090	9/30/17	6/29/20	RP1 - Enhancing Clinical Meaningfulness And Usefulness Of PROMIS Pediatric Measures Via Validation In Children And Adolescents With Rheumatic Disease, Cancer, Or Inflammatory Bowel Disease	\$21,162.00
Recruitment	Bennett	Antonia	Duke University	A030251	9/30/17	6/29/20	RP2 - Enhancing Clinical Meaningfulness And Usefulness Of PROMIS Pediatric Measures Via Validation In Children And Adolescents With Rheumatic Disease, Cancer, Or Inflammatory Bowel Disease	\$26,400.00
Theme Investment (CIPHR)	Bensen	Jeannette	SUNY Buffalo Roswell Park Cancer Institute	309-01	7/1/18	6/30/21	Racial differences in financial impact of prostate cancer treatment and outcome	\$27,354.00
Theme Investment/	Berg	Jonathan	NIH National Institute of Child Health and Human Development	3-U19-HD077632-05S2	9/5/13	8/31/19	NC NEXUS, North Carolina Newborn Exome Sequencing for Universal Screening	\$350,000.00
Theme Investment/	Berg	Jonathan	NIH National Human Genome Research Institute	5-U01-HG006487-08	12/5/11	5/31/21	North Carolina Clinical Genomic Evaluation by Next-gen Exome Sequencing 2	\$2,748,319.00
Recruitment/	Berg	Jonathan	NIH National Human Genome Research Institute	5-U41-HG009650-03	9/12/17	7/31/21	The Clinical Genome Resource - Expert Curation and EHR Integration	\$3,297,416.00
Theme Investment	Bowers	Albert	NIH National Institute of General Medical Sciences	5-R35-GM125005-01-03	9/5/17	8/31/22	Chemoenzymatic Synthesis, Mode of Action and Evolution of Natural Product-based Macrocycles	\$383,398.00
Recruitment	Branca	Rosa	NIH National Institute of Diabetes, Digestive, and Kidney Diseases	5-R01-DK108231-01-05	9/25/15	8/31/21	Sensitive and Specific Detection of BAT Tissue and Activity by Magnetic Resonance with Hyperpolarized Xe-129	\$333,016.00

UCRF Category	PI Last Name	PI First Name	Sponsor	Award Number	Begin	End	Title	Total Cost
Theme Investment	Brenner	Alison	Colon Cancer Coalition		7/1/17	6/30/20	Mailed reminders plus fecal immunochemical testing (FIT) to increase colorectal cancer screening among patients of Roanoke Chowan Community Health Center	\$25,000.00
Innovation Award	Brewer	Noel	Centers for Disease Control and Prevention	5-U01-IP001073-03	8/1/17	7/31/21	Impact of AFX and Physician-to-Physician Engagement on HPV Vaccination in Primary Care: An RCT	\$499,752.00
Innovation Award	Brewer	Noel	American Cancer Society	64922	1/1/20	11/30/20	ACS contract VACS	\$49,555.00
Innovation Award	Brewer	Noel	NIH National Institute on Drug Abuse	1-R01-DA048390-01A1	7/1/20	4/30/25	Informing ENDS policies: Studying the impact of e-cigarette warnings on behavior	\$566,914.00
Recruitment	Brown	Nicholas	NIH National Institute of General Medical Sciences	5-R35-GM128855-01-03	8/1/18	7/31/23	Spindle Assembly Checkpoint Silencing	\$388,750.00
Recruitment	Brudno	Yevgeny	North Carolina State University	572654	3/15/19	4/15/20	Biomaterial-Assisted In Situ Generation of CAR-T Cells	\$7,500.00
Recruitment	Brudno	Yevgeny	North Carolina State University	572956	2/1/20	1/31/22	Image-guided, ultrasound-enhanced long-term intracranial drug delivery	\$58,003.00
Recruitment	Bryant	Ashley	American Cancer Society	DSCN-20-076-01-SCN	9/1/20	8/31/22	Cancer-related Cognitive Impairment in Adults with Acute Leukemia	\$30,000.00
Investment	Busby-Whitehead Jan		American Geriatrics Society		3/15/16	9/30/22	Geriatrics Workforce Enhancement Program (GWEP)	\$197,587.00
Investment (GeriOnc)	Busby-Whitehead Jan		HRSA Bureau of Health Workforce	5-U1Q-HP28734-05-00	7/1/15	6/30/24	Carolina Geriatric Workforce Enhancement Program Coordinating Center	\$755,000.00
Investment (GerিOnc)	Busby-Whitehead Jan		NIH National Institute on Aging	2-T35-AG038047-11	6/1/20	5/31/25	UNC-CH Summer Research Training in Aging for Medical Students (MSTAR)	\$105,365.00
Investment (GerিOnc)	Busby-Whitehead Jan		DHHS Health Resources and Services Administration	1-T1M-HP39080-01	5/1/20	4/30/21	Geriatrics Workforce Enhancement Program COVID	\$90,625.00
Recruitment	Calabrese	Mauro	NIH National Institute of General Medical Sciences	5-R01-GM121806-01-04	1/23/17	12/31/21	Mechanisms of gene silencing induced by long noncoding RNAs	\$316,144.00
Recruitment	Calabrese	Mauro	NIH National Institute of General Medical Sciences	1-R01-GM136819-01	5/1/20	2/29/24	Cooperative control of Polycomb Repressive Complexes by long noncoding RNAs, CpG island DNA, and RNA-binding proteins	\$386,784.00
Recruitment	Calabrese	Mauro	NIH National Institute of Child Health and Human Development	1-F31-HD103370-01	8/1/20	7/31/23	FELLOW:KEENAN BRACEROS Control of gene silencing by long noncoding RNAs in trophoblast stem cells	\$37,408.00
Recruitment	Calabrese	Mauro	NIH National Institute of Child Health and Human Development	1-F31-HD103334-01	8/1/20	7/31/23	Regulation of Polycomb by long noncoding RNAs during pre-implantation development	\$37,027.00
Retention	Campbell	Sharon	NIH National Institute of General Medical Sciences	5-R01-GM115597-01-04	4/1/16	3/31/21	Mechanisms of vinculin activation and force transmission	\$380,388.00
Retention	Campbell	Sharon	NIH National Institute of General Medical Sciences	3-R35-GM134962-01S1	2/1/20	1/31/25	Structure and Mechanism of G-proteins and cell adhesion proteins in regulation of cell growth and motility	\$577,069.00
Investment (Protocol)	Carey	Lisa	Genentech, Inc.		7/3/13	12/31/20	Defining the HER2 positive (+) Breast Cancer Kinome Response to Trastuzumab, Pertuzumab, Combination Trastuzumab + Pertuzumab, or Combination Trastuzumab + Lapatinib	\$74,220.72
Investment (Protocol)	Carey	Lisa	Alliance for Clinical Trials in Oncology Foundation		12/2/14	7/15/21	A Randomized, Placebo-Controlled, Double-Blind, Phase 3 Study Evaluating Safety and Efficacy of the Addition of Veliparib Plus Carboplatin Versus the Addition of Carboplatin to Standard Neoadjuvant Chemotherapy Versus Standard Neoadjuvant Chemotherapy in VT-464 in Patients with Advanced Breast Cancer	\$49,507.95
Investment (Protocol)	Carey	Lisa	Clinipace Worldwide		8/9/16	3/16/20	A Phase 1/2 Open-Label Study to Evaluate the Safety, Tolerability, Pharmacokinetics, Pharmacodynamics and Efficacy of VT-464 in Patients with Advanced Breast Cancer	\$12,141.13

UCRF Category	PI Last Name	PI First Name	Sponsor	Award Number	Begin	End	Title	Total Cost
Investment (Protocol)	Carey	Lisa	Syndax Pharmaceuticals, Inc.	12/15/17	1/2/23	ICCC 1639: A non-randomized, non-comparative, open-label, window trial of entinostat in patients with TNBC (Part 1) or entinostat with or without exemestane in patients with newly diagnosed, Stage I-IIIC, hormone receptor - positive (HR+)	\$55,334.34	
Investment (Protocol)	Carey	Lisa	Susan G Komen for the Cure	SAB180006	11/19/18	11/18/22	Optimizing HER2-targeting using RNA and DNA-based predictive algorithms	\$400,000.00
Investment (Protocol)	Carey	Lisa	Immunomedics, Inc.	8/14/18	8/13/28	An International, Multi-Center, Open-Label, Randomized, Phase III Trial of Sacituzumab Govitecan versus Treatment of Physician Choice in Patients with Metastatic Triple-Negative Breast Cancer Who Received at Least Two Prior Treatments	\$26,979.00	
Investment (Protocol)	Carey	Lisa	Breast Cancer Research Foundation	10/1/18	9/30/20	The Assessment of Genomic Instability in Breast Cancer Patients	\$250,000.00	
Investment (Protocol)	Carey	Lisa	NIH National Cancer Institute	5-R01-CA229409-01-02	6/1/19	5/31/24	Optimizing HER2-targeting using RNA- and DNA-based predictive algorithms	\$616,954.00
Investment (Protocol)	Carey	Lisa	NIH National Cancer Institute	5-UG1-CA233373-02	5/1/19	2/28/25	UNC Lead Academic Participating Site	\$505,201.00
Innovation Award	Caron	Kathleen	NIH National Institute of Child Health and Human Development	5-R01-HD060860-06-10	4/1/09	7/31/21	Adrenomedullin Signaling at the Maternal-Fetal Interface	\$310,847.00
Recruitment	Charlot	Marjory	V Foundation for Cancer Research	DM2020-004	1/15/20	1/15/21	Use of Artificial Intelligence and the Electronic Health Record to Enhance Enrollment of Minority Cancer Patients in Cancer Clinical Trials	\$80,000.00
Investment (Protocol)	Coghill	James	Millennium Pharmaceuticals, Inc.	10/24/19	12/1/27	A Randomized, Double-Blind, Placebo-So-Controlled, Multicenter Study to Evaluate the Efficacy and Safety of Vedolizumab in the Prophylaxis of Intestinal Acute Graft-Versus-Host Disease in Subjects Undergoing Allogeneic Hematopoietic Stem Cell Transplantation	\$27,378.08	
Investment (HTSF)	Conlon	Frank	NIH National Heart, Lung, and Blood Inst	5-R01-HL126509-01-04	4/1/17	2/28/21	Gene Regulatory Networks for Cardiac Morphogenesis	\$276,391.21
Recruitment	Coombs	Catherine	Incyte Corporation	1/31/17	8/31/20	INCB 57643-101 A Phase 1/2, Open-Label, Dose-Escalation/Dose-Expansion, Safety and Tolerability Study of INCB057643 in Subjects with Advanced Malignancies	\$240,448.70	
Recruitment	Coombs	Catherine	H3 Biomedicine Inc.	12/4/17	7/28/22	An Open-label, Multicenter Phase 1 Trial to Evaluate the Safety, Pharmacokinetics and Pharmacodynamics of Splicing Modulator-H3B-8800 for Subjects With Myelodysplastic Syndromes, Acute Myeloid Leukemia, and Chronic Myelomonocytic Leukemia	\$53,610.77

Recruitment	Vincent	Benjamin	Lung Cancer Initiative of North Carolina		7/1/19	6/30/20	Determinants of Immunotherapy Response in Lung Cancer	\$25,000.00
Recruitment	Vincent	Benjamin	Society for Immunotherapy of Cancer		12/13/19	12/12/20	Immunogenomics meta-analysis of IO response data.	\$50,000.00
Recruitment	Vincent	Benjamin	NIH National Cancer Institute	1-R37-CA247676-01A1	7/1/20	6/30/25	GvI mHA Specific T Cell Responses Prevent AML Relapse Following Allogeneic Stem Cell Transplantation	\$525,246.00
Recruitment	Wan	Yisong	NIH National Institute of Allergy and Infectious Diseases	5-R01-AI123193-01-04	12/12/16	11/30/21	Functional protein networks underlying T cell growth, proliferation and differentiation	\$377,975.00
Recruitment	Wan	Yisong	National Multiple Sclerosis Society	RG-1802-30483	10/1/18	9/30/21	Targeting T Cell Function to Halt MS/EAE Development	\$207,117.17
Recruitment	Wang	Andrew	Capio Biosciences, Inc.	SBIRSsub1	8/1/18	1/31/20	SBIR CapioCyte Circulating Tumor Cell Assay as a Biomarker for Cancer Immunotherapy Response	\$25,000.00
Recruitment	Wang	Andrew	University of Illinois Board of Trustees	092535-17169	8/15/18	4/30/22	Targeting through Selective Cell Labeling	\$187,458.00
Recruitment	Wang	Andrew	NIH National Institute of General Medical Sciences	5-R01-GM130590-01-02	2/1/19	11/30/22	Basement Membrane Targeted Nanoparticles for Post-Surgical Adhesion Prevention	\$373,205.00
Retention	Wang	Andrew	Archimmune Therapeutics		3/1/20	2/28/22	Identification of Novel Nanoparticle-Based Therapeutics for Immunotherapy of Cancer	\$127,804.00
Retention	Wang	Greg	American Cancer Society	RSG-16-039-01-DMC	7/1/16	6/30/20	Decipher PRC2 Dysregulation Mechanisms in Multiple Myeloma	\$198,000.00
Retention	Wang	Greg	NIH National Cancer Institute	5-R01-CA211336-01-04	2/1/17	1/31/22	Cancer Epigenetics: A Novel PRC2 Dysregulation Mechanism in Multiple Myeloma	\$390,643.00
Retention	Wang	Greg	Leahn School of Medicine at Mount Sinai	0255-3281-4609	6/8/17	3/31/22	Determining the Role of DNA Methylation Deregulation in Oncogenesis	\$348,584.00
Retention	Wang	Greg	Leukemia and Lymphoma Society	1363-19	7/1/18	6/30/23	Targeting Lysine Methyltransferases EZH2 and EZH1 for Treating MLR-rearranged Leukemias	\$249,644.00
Innovation Award	Waters	Marcey	NIH National Institute of General Medical Sciences	5-R01-GM118499-01-03	9/1/17	8/31/21	Origins of Ligand Binding and Selectivity in Methyllysine Reader and Writer Proteins	\$286,878.00
Innovation Award	Weiner	Ashley	H Lee Moffitt Cancer and Research Institute		5/17/19	7/10/29	Radiation and Chemotherapy with nilotumab followed by Nivolumab for Patients with Stage III Unresectable NSCLC	\$11,452.00
Retention	Weiss	Jared	Pfizer International, LLC (Corporate Office New York)		8/27/13	8/26/21	Phase 1 Safety, Pharmacokinetic and Pharmacodynamic Study of PF-02341066, A C-Met/HGFR Selective Tyrosine Kinase Inhibitor, Administered Orally to Patients with Advanced Cancer	\$51,021.03
Retention	Weiss	Jared	Pharmaceutical Research Associates, Inc.		3/17/14	3/16/20	A Phase 1 Study to Evaluate the Safety, Tolerability, and Pharmacokinetics of MEDI4736 in Subjects with Advanced Solid Tumors	\$58,002.79

UCRF Category	PI Last Name	PI First Name	Sponsor	Award Number	Begin	End	Title	Total Cost
Retention	Weiss	Jared	AstraZeneca Pharmaceuticals LP		1/14/16	1/13/21	A Phase II Randomized, Open-label, Multi-center, Global Study of MEDI4736 in Combination with Tremelimumab versus Standard of Care in the Treatment of First-line Recurrent or Metastatic Squamous Cell Head and Neck Cancer Patients	\$11,880,02
Retention	Weiss	Jared	Merck Sharp and Dohme Corp.		12/7/15	12/2/20	Pembrolizumab and Radiation for Locally Advanced Squamous Cell Carcinoma of the Head and Neck (SCCHN) not Eligible for Cisplatin Therapy	\$191,847.61
Retention	Weiss	Jared	Loxo Oncology, Inc.		5/29/18	6/14/28	A Phase 1 Study of Oral LUOXO-292 in Patients with Advanced Solid Tumors, Including RET-Fusion Non-Small Cell Lung Cancer, Medullary Thyroid Cancer and Other Tumors with Increased RET Activity	\$419,103.75
Retention	Weiss	Jared	V Foundation for Cancer Research	D2018-034	9/15/18	9/15/21	Targeting GD2 Ganglioside in Small Cell Lung Cancer	\$100,000.00
Retention	Weiss	Jared	Amgen, Inc.		12/20/18	12/31/28	Phase Ib/I Study Of IV Nivolumab And Intrapleural Talmogene Laherparepvec For Patients With Malignant Pleural Effusion	\$139,591.49
Retention	Weiss	Jared	Boston Biomedical, Inc.		2/6/19	2/10/29	A First-in-Human Phase I Trial to Determine the Safety and the Pharmacokinetic Profile of DSP-0509, a Synthetic Toll-Like Receptor 7 (TLR-7) Agonist, in Adult Patients with Advanced Solid Tumors	\$290,042.47
Retention	Weiss	Jared	Criterium Inc.		9/9/19	8/31/20	Treatment Patterns, Mechanisms of Resistance and Outcomes among patients with EGFR, ALK and ROS1 Translocated Non-Small Cell Lung Cancer: An ATOMIC Consortium Analysis	\$19,800.00
Retention	Weiss	Jared	Mirati Therapeutics, Inc		7/12/19	8/31/29	A Phase 1/2 Multiple Expansion Cohort Trial of MRTX849 in Patients with Advanced Solid Tumors with KRAS G12C Mutation	\$47,856.00
Recruitment	Wheeler	Stephanie	Duke University	A031031	1/1/19	12/31/23	Disparities in the Use of Oral Anticancer Agents in Kidney Cancer	\$117,916.00
Recruitment	Wheeler	Stephanie	American Cancer Society	60241	2/9/19	8/31/20	Developing and validating a risk stratification framework for breast cancer survivors	\$110,000.00
Recruitment	Wheeler	Stephanie	NIH National Cancer Institute	1-R01-CA237357-01	9/1/19	8/31/24	Optimizing Endocrine Therapy Adherence through Motivational Interviewing and Text Interventions	\$636,094.00
Recruitment	Wheeler	Stephanie	NIH National Cancer Institute	1-R01-CA240092-01	8/15/19	7/31/23	Addressing Cancer-Related Financial Toxicity In Rural Oncology Care Settings	\$491,967.00
Investment (HTSF)	Whitmire	Jason	NIH National Institute of Allergy and Infectious Diseases	5-R01-AI138337-01-03	9/1/18	8/31/23	Obesity associated viral pathogenesis	\$388,750.00
Investment (HTSF)	Whitmire	Jason	NIH National Institute of Allergy and Infectious Diseases	5-R01-AI143894-01-02	2/1/19	1/31/24	Regulation of CD8+ T cell responses to chronic virus infection	\$500,892.00
Recruitment	Williams	David	Virginia Commonwealth University	F00007299_SA001	8/1/18	6/30/23	The role of the MBD2-NURD complex in globin gene silencing	\$328,069.00
Recruitment	Willson	Tim	Duke University	3130316	6/15/18	6/14/21	Cancer cell intrinsic and extrinsic actions of steroid hormones in breast tumors	\$137,787.00
Recruitment	Willson	Tim	Structural Genomics Consortium		9/30/18	9/30/20	Structural Genomics Consortium Grant Funding	\$250,000.00
Recruitment	Willson	Tim	North Carolina Biotechnology Center	2020-BMG-3003	2/1/20	3/31/20	PharmSci 2020: Open Science and Drug Discovery: basic research to new medicines.	\$8,784.00
Recruitment	Willson	Tim	Agora Open Science Foundation	AOST-M4ND-002A	7/1/20	12/30/20	Chemical Probes of the WDR41-C9ORF72-SMARCB complex to enable discovery of therapies for Frontotemporal Dementia	\$51,137.00
Recruitment	Willson	Tim	University of Cape Town	UCT00028866	4/3/20	3/31/25	Repurposing kinase inhibitor chemotypes as antimalarials	\$76,918.00
